in this work the interaction between the higgs boson and the top quark is studied with the proton proton collisions at 13 tev provided by the lhc at the cms detector at cern geneva at the lhc these particles are produced simultaneously via the associate production of the higgs

boson with one top quark $t\bar{h}$ process or two top quarks $t\bar{t}h$ process compared to many other possible outcomes of the proton proton interactions these processes are very rare as the top quark and the higgs boson are the heaviest elementary particles known hence identifying them constitutes a significant experimental challenge a high particle selection efficiency in the cms detector is therefore crucial at the core of this selection stands the level 1 L1 trigger system a system that filters collision events to retain only those with potential interest for physics analysis the selection of hadronically decaying τ leptons expected from the higgs boson decays is especially demanding due to the large background arising from the qcd interactions the first part of this thesis presents the optimization of the L1 τ algorithm in run 2 2016 2018 and run 3 2022 2024 of the Lhc it includes the development of a novel trigger concept for the high luminosity Lhc foreseen to start in 2027 and to deliver 5 times the current instantaneous luminosity to this end sophisticated algorithms based on machine learning approaches are used facilitated by the increasingly modern technology and powerful computation of the trigger system the second part of the work presents the search of the $t\bar{h}$ and $t\bar{t}h$ processes with the subsequent decays of the higgs boson to pairs of $\tau\tau$ lepton W bosons or Z bosons making use of the data recorded during run 2 the presence of multiple particles in the final state along with the low cross section of the processes makes the search an ideal use case for multivariant discriminants that enhance the selectivity of the signals and reject the overwhelming background contributions the discriminants presented are built using state of the art machine learning techniques able to capture the correlations amongst the processes involved as well as the so called matrix element method MEM which combines the theoretical description of the processes with the detector resolution effects the level of sophistication of the methods used along with the unprecedented amount of collision data analyzed result in the most stringent measurements of the $t\bar{h}$ and $t\bar{t}h$ cross sections up to date

reviews of environmental contamination and toxicology contains timely review articles concerned with all aspects of chemical contaminants including pesticides in the total environment including toxicological considerations and consequences it attempts to provide concise critical reviews of advances philosophy and significant areas of accomplished or needed endeavor in the total field of residues of these and other foreign chemicals in any segment of the environment as well as toxicological implications

the subject of this book is complex analysis in several variables this text begins at an elementary level with standard local results followed by a thorough discussion of the various fundamental concepts of complex convexity related to the remarkable extension properties of holomorphic functions in more than one variable it then continues with a comprehensive introduction to integral representations and concludes with complete proofs of substantial global results on domains of holomorphy and on strictly pseudoconvex domains inc including for example c fefferman's famous mapping theorem the most important new feature of this book is the systematic inclusion of many of the developments of the last 20 years which centered around integral representations and estimates for the cauchy riemann equations in

particular integral representations are the principal tool used to develop the global theory in contrast to many earlier books on the subject which involved methods from commutative algebra and sheaf theory and or partial differential equations i believe that this approach offers several advantages 1 it uses the several variable version of tools familiar to the analyst in one complex variable and therefore helps to bridge the often perceived gap between complex analysis in one and in several variables 2 it leads quite directly to deep global results without introducing a lot of new machinery and 3 concrete integral representations lend themselves to estimations therefore opening the door to applications not accessible by the earlier methods

L'immersion française est née dans les années 1960 dans une école primaire en banlieue de Montréal afin de répondre aux besoins des enfants anglophones appelés à vivre dans le nouveau contexte francophone du Québec si elle s'est rapidement répandue dans les

établissements primaires et secondaires à travers le Canada en revanche elle est aujourd'hui encore pratiquement inexistante au niveau universitaire Graham Fraser le commissaire aux langues officielles porte parole fédéral de la promotion et de la protection des droits linguistiques a maintes fois recommandé d'étendre l'offre en immersion au niveau postsecondaire le présent ouvrage fait écho à cette recommandation et le titre politiques et pédagogies de l'immersion en français au niveau universitaire au Canada explicite le caractère éminemment politique de toute disposition tout aménagement concernant les langues en particulier dans un contexte bilingue ou plurilingue la préface de Graham Fraser situe le concept d'immersion dans une perspective historique des débats linguistiques au Canada l'ouvrage fait état des lieux des politiques linguistiques et des aménagements de l'immersion en français au palier universitaire en recensant les dispositifs des universités canadiennes et plus spécifiquement ceux de l'université d'Ottawa cet ouvrage incontournable servira de cadre de référence pour les institutions universitaires au Canada et dans le monde publié en français
