progress in the application of machine learning ml to the physical and life sciences has been rapid a decade ago the method was mainly of interest to those in computer science departments but more recently ml tools have been developed that show significant potential across wide areas of science there is a growing consensus that ml software and related areas of artificial intelligence may in due course become as fundamental to scientific research as computers themselves yet a perception remains that ml is obscure or esoteric

that only computer scientists can really understand it and that few meaningful applications in scientific research exist this book challenges that view with contributions from leading research groups it presents in depth examples to illustrate how ml can be applied to real chemical problems through these examples the reader can both gain a feel for what ml can and cannot so far achieve and also identify characteristics that might make a problem in physical science amenable to a ml approach this text is a valuable resource for scientists who are intrigued by the power of machine learning and want to learn more about how it can be applied in their own field

as the once in a lifetime stimulus of a pandemic creates the opportunity for change this ground breaking and timely edited text is a must have springboard for the re imagination of education system leadership how can education stakeholders act in collaboration to lead us into a new and different age

the cover extension to the stand prognosis model predicts tree canopy closure crown volume crown profile area and foliage biomass within vertical height classes and the probability of occurrence height and cover of shrubs in forest stands the model may be used to produce a descriptive summary of a stand at the time of inventory or to project overstory and understory characteristics through time for natural and managed stands this paper documents use of the cover program an adjunct to version 5 0 of the prognosis model preparation of input interpretation of output program control and model characteristics are described potential applications of cover estimates to wildlife hydrology and insect pest modeling are presented

this book constitutes the refereed proceedings of the second international conference on distributed artificial intelligence dai 2020 held in nanjing china in october 2020 the 9 full papers presented in this book were carefully reviewed and selected from 22 submissions dai aims at bringing together international researchers and practitioners in related areas including general ai multiagent systems distributed learning computational game theory etc to provide a single high profile internationally renowned forum for research in the theory and practice of distributed ai due to the corona pandemic this event was held virtually
