under the environmental impact assessment eia directive decision making
bodies must consider the environmental effects of projects before allowing
them to proceed as the house of commons will be asked at third reading to
approve the building of crossrail this document aims to inform the debate by
summarising the work that has been done to assess control and mitigate the
environmental impacts of the scheme it also explains why the government
takes the view that the project is worthy of support it covers the environmental
statement role of the select committee the general approach to the control
and mitigation of environmental impacts post mitigation impacts the need for
and benefits of crossrail and human rights the appendices which form the bulk
of the document include a summary of the reason for the governments
support of the project a list of information papers and other sources of
information and examples of correspondence on the consideration of

the choice of different modalities for transferring resources to extremely poor
households food provided in kind cash or intermediate modalities such as
vouchers has long been the subject of active debate in both policy and
research this note provides an overview of the recent evidence around the
relative effectiveness of cash and food aid drawing on studies conducted over

the last 20 years around the world each modality has some potential advantages cash transfers are flexible in allowing recipients to use resources to meet a range of material needs including but not limited to food and when they do choose to purchase food allows them to choose a basket of items that is optimal based on their preferences the corresponding disadvantage of food transfers is that if recipients desire nonfood items they have to resell food for funds often at a nontrivial transaction cost cash transfers are often easier and lower cost to deliver particularly given the substantial growth of electronic payment systems compared with the more complex logistical requirements of delivering food especially perishable food they are also generally less observable potentially rendering them less likely to generate stigma or demands for sharing from nonrecipients cash can also have indirect beneficiaries through positive spillover effects in the local economy though the evidence base for this is not large and suggests that spillovers may be negative in some contexts

soldiers deployed during the 1991 Persian Gulf War were exposed to high concentrations of particulate matter (PM) and other airborne pollutants. Their exposures were largely the result of daily windblown dust, dust storms, and smoke from oil fires. On returning from deployment, many veterans complained of persistent respiratory symptoms. With the renewed activity in the Middle East over the last few years, deployed military personnel are again exposed to dust storms and daily windblown dust, in addition to other types of PM such as diesel exhaust and particles from open pit burning. On the basis of the high concentrations observed and concerns about the potential health effects, DoD designed and implemented a study to characterize and quantify the PM in the ambient environment at 15 sites in the Middle East. The endeavor is known as the DoD Enhanced Particulate Matter Surveillance Program (EPMSP). The U.S. Army asked the National Research Council to review the EPMSP report. In response, the present evaluation considers the potential acute and chronic health implications on the basis of information presented in the report. It also considers epidemiologic and health surveillance data collected by the USACHPPM to assess potential health implications for deployed personnel and recommends methods for reducing or characterizing health risks.

ARIST, published annually since 1966, is a landmark publication within the information science community. It surveys the landscape of information science and technology, providing an analytical, authoritative, and accessible overview of recent trends and significant developments. The range of topics varies considerably, reflecting the dynamism of the discipline and the diversity of theoretical and applied perspectives. While *ARIST* continues to cover key topics associated with classical information science (e.g., bibliometrics, information retrieval), editor Blaise Cronin is selectively expanding its footprint in
