this thesis reports on the final measurement of the flavor mixing phase in decays of strange bottom mesons $b \rightarrow s$ into J/ψ and ϕ mesons performed in high energy proton antiproton collisions recorded by the collider experiment at fermilab interference occurs between direct decays and decays following virtual particle antiparticle transitions $b \rightarrow s$ and $\bar{b} \rightarrow \bar{s}$ the phase difference between transition amplitudes mixing phase is observable and extremely sensitive to contributions from non standard model particles or interactions that may be very hard to detect otherwise a fact that makes the precise measurement of the $b \rightarrow s$ mixing phase one of the most important goals of particle physics the results presented include a precise determination of the mixing phase and a suite of other important supplementary results all measurements are among the most precise available from a single experiment and provide significantly improved constraints on the phenomenology of new particles and interactions

an authoritative and accessible introduction to the concepts and tools needed to make ecology a more predictive science ecologists are being asked to respond to unprecedented environmental challenges how can they provide the best available scientific information about what will happen in the future ecological forecasting is the first book to bring together the concepts and tools needed to make ecology a more predictive science ecological forecasting presents a new way of doing ecology a closer connection between data and models can help us to project our current understanding of ecological processes into new places and times this accessible and comprehensive book covers a wealth of topics including bayesian calibration and the complexities of real world data uncertainty quantification partitioning propagation and analysis feedbacks from models to measurements state space models and data fusion iterative forecasting and the forecast cycle and decision support features case studies that highlight the advances and opportunities in forecasting across a range of ecological subdisciplines such as epidemiology fisheries endangered species biodiversity and the carbon cycle presents a probabilistic approach to prediction and iteratively updating forecasts based on new data describes statistical and informatics tools for bringing models and data together with emphasis on quantifying and partitioning uncertainties dealing with the complexities of real world data feedbacks to identifying data needs improving models and decision support numerous hands on activities in r available online
