this comprehensive volume contains the state of the art on ode s and pde s of different nature functional differential equations delay equations and others mostly from the dynamical systems point of view a broad range of topics are treated through contributions by leading experts of their fields presenting the most recent developments a large variety of techniques are being used stressing geometric topological ergodic and numerical aspects the scope of the book is wide ranging from pure mathematics to various applied fields examples of the latter are provided by subjects from earth and life sciences classical mechanics and quantum mechanics among others the proceedings have been selected for coverage in index to scientific technical proceedings istp isi proceedings index to scientific technical proceedings istp cdrom version isi proceedings cc proceedings engineering physical sciences

this book is a collection of lecture notes on nonlinear conservation laws fluid systems and related topics delivered at 2007 shanghai mathematics summer school held at fudan university china by world s leading experts in the field the volume comprises 5ve chapters that cover a range of topics from mathematical theory and numerical approximation of both incompressible and compressible fluid flows kinetic theory and conservation laws to statistical theories for fluid systems researchers and graduate students who want to work in this field will benefit from this essential reference as each chapter leads readers from the basics to the frontiers of the current research in these areas

this volume contains edited versions of 11 contributions given by main speakers at the nato advanced study institute on lreal and complex dynamical systems in hillerød denmark june 20th july 2nd 1993 the vision of the institute was to illustrate the interplay between two important fields of mathematics real dynamical systems and

complex dynamical systems the interaction between these two fields has been growing over the years problems in real dynamical systems have recently been solved using complex tools in the real or by extension to the complex in return problems in complex dynamical systems have been settled using results from real dynamical systems the programme of the institute was to examine the state of the art of central parts of both real and complex dynamical systems to reinforce contact between the two aspects of the theory and to make recent progress in each accessible to a larger group of mathematicians

this volume contains information on the nucleotide composition of bacterial dna eukaryotic protists etc nearest neighbour frequencies in dna repeated and unique sequences in eukaryotes nucleic acid sequences in bacteriophage chloroplasts mitochondria kinetoplasts satellites and trna information on the physical properties of rna atomic coordinates of dna dna also included in this volume is information on enzymes involved in nucleic acid function

this proceedings volume contains articles related to the research presented at the 2017 simons symposium on p adic hodge theory this symposium was focused on recent developments in p adic hodge theory especially those concerning integral questions and their connections to notions in algebraic topology this volume features original research articles as well as articles that contain new research and survey some of these recent developments it is the first of three volumes dedicated to p adic hodge theory

on november 3 2005 alexander vasil evich kazhikhov left this world untimely and unexpectedly he was one of the most influential mathematicians in the mechanics of fluids and will be remembered for his outstanding results that had and still have a considerably significant influence in the field among his many achievements were recall that he was the founder of the modern mathematical theory of the navier stokes equations describing one and two dimensional motions of a viscous compressible and heat conducting gas a brief account of professor kazhikhov's contributions to science is provided in the following article scientific portrait of alexander vasil evich kazhikhov this volume is meant to be an expression of high regard to his memory from most of his friends and his colleagues in particular it collects a selection of papers that represent the latest progress in a number of new important directions of mathematical physics mainly of mathematical fluid mechanics these papers are written by world renowned specialists most of them were friends students or colleagues of professor kazhikhov who either worked with him directly or met him many times in official scientific meetings where they had the opportunity of discussing problems of common interest

this two volume book is devoted to mathematical theory numerics and applications of hyperbolic problems hyperbolic problems have not only a long history but also extremely rich physical background the development is highly stimulated by their applications to physics biology and engineering sciences in particular by the design of effective numerical algorithms due to recent rapid development of computers more and more scientists use hyperbolic partial differential equations and related evolutionary equations as basic tools when proposing new mathematical models of various phenomena and related numerical algorithms this book contains 80 original research and review papers which are written by leading researchers and promising young scientists which cover a diverse range of multi disciplinary topics addressing theoretical modeling and computational issues arising under the umbrella of hyperbolic partial differential equations it is aimed at mathematicians researchers in applied sciences and graduate students

this volume presents the most wide ranging treatment available today of the malayo polynesian languages of southeast asia and their outliers it offers a comprehensive account of the historical relations and typological diversity in the group including current debates in their prehistories and descriptive priorities for future study
