in the evolution of scientific theories concern with uncertainty is almost invariably a concomitant of maturation this is certainly true of the evolution of physics economics operations

research communication sciences and a host of other fields and it is true of what has been happening more recently in the area of artificial intelligence most notably in the development of theories relating to the management of uncertainty in knowledge based systems in science it is traditional to deal with uncertainty through the use of probability theory in recent years however it has become increasingly clear that there are some important facets of uncertainty which do not lend themselves to analysis by classical probability based methods one such facet is that of lexical elasticity which relates to the fuzziness of words in natural languages as a case in point even a simple relation x y and z expressed as if x is small and y is very large then between z is not very small does not lend itself to a simple interpretation within the framework of probability theory by reason of the lexical elasticity of the predicates small and large
