to anticipate the choices faced during each stage filled with real world examples from engineering science and industry planning and executing credible experiments a guidebook for engineering science industrial processes agriculture and business offers chapters that challenge experimenters at each stage of planning and execution and emphasizes uncertainty analysis as a design tool in addition to its role for reporting results tested over decades at stanford university and internationally the text employs two powerful free open source software tools gosset to optimize experiment design and r for statistical computing and graphics a website accompanies the text providing additional resources and software downloads a comprehensive guide to experiment planning execution and analysis leads from initial conception through the experiment s launch to final report prepares the reader to anticipate the choices faced throughout an experiment hones the motivating question employs principles and techniques from design of experiments doe selects experiment designs to obtain the most information from fewer experimental runs offers chapters that propose questions that an experimenter will need to ask and answer during each stage of planning and execution demonstrates how uncertainty analysis guides and strengthens each stage includes examples from real life industrial experiments accompanied by a website hosting open source software planning and executing credible experiments is an excellent resource for graduates and senior undergraduates as well as professionals across a wide variety of engineering disciplines

people who use software manuals want to get something done procedural information directly supports this goal but the use of declarative information in manuals has often been under discussion current research gives rise to the expectation that manual users tend to skip declarative information most of the time also no effects of declarative information in software manuals have yet been found in this study information use and information effects in software manuals are investigated in three experiments thereby taking different user types different task types and different information arrangements into account a new technique was applied the click read method this technique enables the software user to use the manual and carry out software tasks at the same time while information selection and times are recorded automatically in logfiles for the first time quantitative data are presented about the amounts of procedural and declarative information that were selected and the times that were spent using these information types although procedural information is selected more often and used longer declarative information appears to be a substantial part of the information selection moreover the results show that using declarative information positively affects performance on future tasks performance on reasoning tasks and factual knowledge
