concise volume for general students by prominent philosopher and mathematician explains what math is and does and how mathematicians do it lucid and cogent should delight you the new york times 1911 edition

as the second main source of the true religion of islam hadith has a history full of ups and downs as far as the manner of its transmittal and the periods of its compilation and publication are concerned those who are acquainted with islamic history have all acknowledged that from the time of transmittal up to now hadith as been associated with many desirable as well as undesirable events and its compilation and publication in some periods have had both faithful advocates and stern adversaries for this reason learning the history of hadith though a piece of knowledge outside the different branches of the science of hadith is essential for all those who want to benefit from the sunnah and the corpus of hadith especially in view of the fact that the beginning of hadith compilation and its mechanism have not been the same for the proponents of the various islamic schools of thought each of them having a different opinion whose outcome may adversely affect the credibility and status of the existing traditions ahadith the present book which has been written as a textbook in the tertiary level of islamic studies endeavors to present the general subjects relevant to hadith and its history as well as to acquaint the students of this field with the sunni hadith collections and the four books kutub al arba ah of the shi ah in a simple and easy to understand approach

designed to meet the needs of undergraduate students introduction to biomechanics takes the fresh approach of combining the viewpoints of both a well respected teacher and a successful student with an eye toward practicality without loss of depth of instruction this book seeks to explain the fundamental concepts of biomechanics with the accompanying web site providing models sample problems review questions and more introduction to biomechanics provides students with the full range of instructional material for this complex and dynamic field

originally published in 1970 this was peter herriot s first book in this objective critical evaluation of a rapidly expanding field professor herriot examines language as skilled behaviour generative linguistics and psychology behaviourist approaches to meaning language acquisition and impairment and language and thought he stresses throughout the necessity for empirical research and for experimental verification of hypotheses he also feels that language behaviour should be analysed in a comprehensive form placing emphasis not only on structural aspects but also on the importance of meaning and context to any account of language today it can be read and enjoyed in its historical

context

the second edition of jack crumley s an introduction to epistemology strikes a balance between the many issues that engage contemporary epistemologists and the contributions of the major historical figures he shows not only how philosophers such as descartes hume locke berkeley and kant foreground the contemporary debates but also why they deserve consideration on their own terms a substantial revision of the first edition the second edition is even more accessible to students the new edition includes recent work on contextualism evidentialism externalism and internalism and perceptual realism as well the chapter on coherence theory is substantially revised reflecting recent developments in that area new to this second edition is a chapter on feminist epistemology which includes discussions of major positions and themes such as feminist empiricism feminist standpoint epistemology postmodern epistemology and feminist critiques of objectivity it presents the important contributions of philosophers such as sandra harding helen longino genevieve lloyd and others each chapter ends with a list of study questions and readings for further study

first published in 1997 this is a book about the different ways in which crime and criminal behaviour has been explained in modern times it will be seen that there are different explanations or theories which have been proposed at various times during the past 200 years by among others legal philosophers biologists psychologists sociologists and political scientists

reprint of the original first published in 1866

the exiled russian sociologist and legal scholar nicholas s timasheff s place in the forefront of the sociology of law was established with the publication in 1939 of an introduction to the sociology of law his magnum opus articulates a systematic legal sociology the book s title is misleading giving the false impression that the volume is merely a textbook intended for classroom use it is much more than this an introduction to the sociology of law is a sophisticated treatise that explains precisely and methodically the law as a social force it makes two fundamental points law can indeed must be studied by sociology and law is a combination of socio ethical and imperative coordination of human behavior

serving as the foundation for a one semester course in stochastic processes for students familiar with elementary probability theory and calculus introduction to stochastic modeling fourth edition bridges the gap between basic probability and an intermediate level course in stochastic processes the objectives of the text are to introduce students to the standard concepts and methods of stochastic modeling to illustrate the rich diversity of applications of stochastic processes in the applied sciences and to provide exercises in the

application of simple stochastic analysis to realistic problems new to this edition realistic applications from a variety of disciplines integrated throughout the text including more biological applications plentiful completely updated problems completely updated and reorganized end of chapter exercise sets 250 exercises with answers new chapters of stochastic differential equations and brownian motion and related processes additional sections on martingale and poisson process realistic applications from a variety of disciplines integrated throughout the text extensive end of chapter exercises sets 250 with answers chapter 1 9 of the new edition are identical to the previous edition new chapter 10 random evolutions new chapter 11 characteristic functions and their applications

health planning is a critical component when responding to the health needs of low and middle income countries characterised by particularly stringent resource constraints the major communicable diseases such as aids tb and malaria often appear in parallel with growing non communicable diseases including heart disease and diabetes and yet resources are often less than the levels recommended by the world health organisation for basic health care the new edition of this well respected text explains the importance of health planning in both developing regions such as africa and those in transition such as central and eastern europe it stresses the importance of understanding the national and international context in which planning occurs and provides an up to date analysis of the major current policy issues including health reforms separate chapters are dedicated to the distinct issues of finance for health care and humanresource planning the various techniques used at each stage of the planning process are explained starting with the situational analysis and then looking in turn at priority setting option appraisal programming implementation monitoring and evaluation the book ends by examining the challengesfacing planners in the 21st century particularly in the light of growing globalisation a major theme of the book is the need to recognise and reconcile the inevitable tension that lies between value judgements and rational decision making as such in addition to introducing techniques such as costing and economic appraisal it also outlines techniques such as stakeholder analysis for understanding the relative attitudes and power of different groups in planning decisions each chapter includes a comprehensive bibliography including key websites a summary and exercises to help the reader practise techniques and better understand the content the book argues that all health professionals and community groups should be involved in the planning process for it to be effective and will therefore appeal to anyone involved in planning

point processes and random measures find wide applicability in telecommunications earthquakes image analysis spatial point patterns and stereology to name but a few areas the authors have made a major reshaping of their work in their first edition of 1988 and now present their introduction to the theory of point processes in two volumes with sub

titles elementary theory and models and general theory and structure volume one contains the introductory chapters from the first edition together with an informal treatment of some of the later material intended to make it more accessible to readers primarily interested in models and applications the main new material in this volume relates to marked point processes and to processes evolving in time where the conditional intensity methodology provides a basis for model building inference and prediction there are abundant examples whose purpose is both didactic and to illustrate further applications of the ideas and models that are the main substance of the text

in this distinctive textbook for hebrew bible courses author tzvi novick s approach is thematic rather than chronological sorting the books according to their historical context theological claims and literary conventions novick examines and elucidates the historical and intellectual development of the hebrew bible with attentiveness to both historical critical and traditional canonical approaches an introduction to the scriptures of israel focuses on the dichotomy of the particular and the universal it shows how this dichotomy impacts each book s style and content and how it informs the development of jewish and christian traditions this nontraditional textbook is coherent engaging and succinct a perfect resource for any introductory hebrew bible course contents preface abbreviations 1 three introductions 2 the wisdom tradition religion without revelation 3 revelation and love the patriarchal narratives and the song of songs 4 joseph and narrative 5 the exodus freedom and sonship 6 sinai covenant and code 7 the problem of monarchy samuel and kings 8 condemning israel sparing the nations amos and jonah 9 eden and the art of reading 10 priestly theology and holy space 11 exile and return prophetic visions 12 the consolidation of judaism temple and torah 13 violence and identity joshua and judges 14 jews gentiles and gender esther ruth ezra and nehemiah 15 apocalyptic daniel and the dead sea scrolls 16 the israelite at prayer the book of psalms subject index scripture and other ancient sources index

an innovative introduction to ecology and evolution this unique textbook introduces undergraduate students to quantitative models and methods in ecology behavioral ecology evolutionary biology and conservation it explores the core concepts shared by these related fields using tools and practical skills such as experimental design generating phylogenies basic statistical inference and persuasive grant writing and contributors use examples from their own cutting edge research providing diverse views to engage students and broaden their understanding this is the only textbook on the subject featuring a collaborative active learning approach that emphasizes hands on learning every chapter has exercises that enable students to work directly with the material at their own pace and in small groups each problem includes data presented in a rich array of formats which students use to answer questions that illustrate patterns principles and methods topics

range from hardy weinberg equilibrium and population effective size to optimal foraging and indices of biodiversity the book also includes a comprehensive glossary in addition to the editors the contributors are james beck cawas behram engineer john gaskin luke harmon jon hess jason kolbe kenneth h kozak robert j robertson emily silverman beth sparks jackson and anton weisstein provides experience with hypothesis testing experimental design and scientific reasoning covers core quantitative models and methods in ecology behavioral ecology evolutionary biology and conservation turns discussion sections into thinking labs professors a supplementary instructor s manual is available for this book it is restricted to teachers using the text in courses for information on how to obtain a copy refer to press.princeton.edu/class-use/solutions.html
