recent findings on the role of the cell wall of pathogenetic fungi in the pathogenic processes of both vertebrates and invertebrates are presented the fungal cell wall not only gives shape to the fungus but it is a dynamic structure allowing fungal growth and survival of fungi in both friendly and adverse environments it acts as a living sieve controlling the entry of nutrients and the secretion of metabolic products in terms of fungal pathogenesis the fungal wall may be responsible for eliciting the defense response of their respective invertebrate or vertebrate hosts or conversely it may provide protection against the host defense system during the pathogenic process

biology and chemistry of eucaryotic cell surfaces contains the proceedings of the miami winter symposia held on january 14 15 1974 and organized by the department of biochemistry university of miami school of medicine in miami florida organized into 27 chapters separating the manuscripts presented at the symposium this book presents the stochastic studies on cell surface stickiness and the adhesion and aggregation of blood platelets this text also explains the cell contact and transformation induced changes in the

dynamic organization of normal and neoplastic cell plasma membranes and their role in lectin mediated toxicity toward tumor cells it also looks into the chemical components of surface membranes related to biological properties carbohydrate antigens of cell surfaces and molecular orientation of erythrocyte membrane glycoproteins some other chapters discuss the cell envelope glycoprotein biosynthesis in fungi cellular lectin receptors and topographical alterations of the fat cell surface membrane elicited by concanavalin a immunochemical evidence for putrescine sites on the membrane of mammalian cells as well as the fractionation and biosynthesis of membrane components in erythroid cells are also described

this book analyzes all aspects of metronomic chemotherapy a new approach involving low dose long term and frequently administered therapy that has preclinical and clinical activity in various tumors after an opening section on the pharmacological bases of metronomic chemotherapy including its antiangiogenic effects and impact on immunity preclinical studies on various classes of drug are discussed clinical applications of metronomic chemotherapy in a wide variety of tumors are then addressed in detail with description of the results of all published studies the clinical pharmacology of metronomic chemotherapy is also considered in depth encompassing pharmacokinetics pharmacogenetics pharmacoeconomics and adverse drug reactions the book closes by describing the role of this therapy in the veterinarian clinic

cancer chemotherapy can be traced back to the 1940 s and since then the world has witnessed the discovery and the important application of several new drugs the successes of combination chemotherapy suggested that all cancers can be treated provided that the correct combination of drugs at the correct doses and correct intervals are established however with time tumor cells develop mechanisms of resistance to apoptosis and no longer respond to the majority of cytotoxic therapies sensitization of cancer

cells for chemo immuno radio therapy edited by benjamin bonavida reviews novel approaches developed to reverse tumor cell resistance to chemo immuno radio therapy and the use of various sensitizing agents in combination with various cytotoxics such sensitizing agents target gene products that regulate resistance and therefore identify novel targets for drug development this book also introduces several of the current approaches that have been developed by established investigators in the field that are aimed at overcoming resistance this book is the first that compiles studies on tumor cell sensitization and is useful for students scientists clinicians and pharmaceutical companies

this book offers a comprehensive introduction to translational efforts in breast cancer addressing the latest approaches to precision medicine based on the current state of understanding of breast cancer with the latest developments in breast cancer research our understanding of the genomic changes and the oncogenic signaling cascade of breast cancer has made considerable strides further the immuno environment has been demonstrated as the barrier to clinical cancer in addition major advances in cancer biology immunology genomics and metabolism have broken new ground for designing therapeutic approaches and selecting appropriate treatments on the basis of more precise information on the individual patient as a result of these two trends a clearer picture of the molecular landscape of breast cancers has facilitated the development of diagnostic prognostic and predictive biomarkers for clinical oncology all these aspects are addressed in this volume which offers a comprehensive resource for researchers graduate students and oncologists in cancer research
