the connection between childhood and poetry runs deep and yet poetry written for children has been neglected by criticism and resists prevailing theories of children's literature drawing on walter ong's theory of orality and on iain mcgilchrist's work on brain function this book develops a new theoretical framework for the study of children's poetry from tongue to text argues that the poem is a multimodal form that exists in the borderlands between the world of experience and the world of language and between orality and literacy places that children themselves inhabit engaging with a wide range of poetry from nursery rhymes and christina rossetti to michael rosen and carol ann duffy debbie pullinger demonstrates how these tactful works are shaped by the dynamics of orality and textuality

normative externalism argues that it is not important that people live up to their own principles what matters in both ethics and epistemology is that they live up to the correct principles that they do the right thing and that they believe rationally this stance that what matters are the correct principles not one's own principles has implications across ethics and epistemology in ethics it undermines the ideas that moral uncertainty should be treated just like factual uncertainty that moral ignorance frequently excuses moral wrongdoing and that hypocrisy is a vice in epistemology it suggests we need new treatments of higher order evidence and of peer disagreement and of

circular reasoning and the book suggests new approaches to each of these problems although the debates in ethics and in epistemology are often conducted separately putting them in one place helps bring out their common themes one common theme is that the view that one should live up to one's own principles looks less attractive when people have terrible principles or when following their own principles would lead to riskier or more aggressive action than the correct principles another common theme is that asking people to live up to their principles leads to regresses it can be hard to know what action or belief complies with one's principles and now we can ask in such a case should a person do what they think their principles require or what their principles actually require both answers lead to problems and the best way to avoid these problems is to simply say people should follow the correct principles

in part i prof targowski takes us through the evolution of modern computing and information systems while much of this material is familiar to those of us who have lived through these developments it would definitely not be familiar to our children or our students he also introduces a perspective that i found both refreshing and useful looking at the evolution on a country by country basis for those of us who live in the u s it is all too easy to imagine that evolution to be a purely local phenomenon i found my appreciation of the truly global nature of computing expanding as he walked me through each country's contributions in parts ii and iii constituting nearly half of the book targowski provides what i would describe as an in depth case study of the challenges and successes of informatics in poland as he tells each story many of which involved him personally the reader cannot help but better understand the close relationship between the freedoms that we in the west take for granted and the ability to produce innovations in it even after poland left the orbit of the former soviet union the remaining vestiges of the old way of thinking remained a major impediment to progress being right and being rigorous were far less important than being in tune with the approved ways of thinking there are important lessons to be learned here particularly as we try to project how it will evolve in rapidly developing economies such as china but from my experience they apply equally well to western academia where moving outside of preferred values and patterns of research can lead a scholar to be ignored or even disparaged in part iv targowski presents a bold forward looking synthesis of informatics and informing science in the future building upon articles recently published in informing science the international journal of an emerging transdiscipline he presents a conceptual scheme of historical informing waves that builds upon historians such as toynbee he then considers how these trends will necessarily force us to rethink how we develop and apply it he does not steer away from the controversial but he also provides cogent arguments for all his predictions and recommendations
