in search of sustainable and inclusive palm oil production builds on the old debate regarding the role of smallholder farmers in society and links it to the integration of smallholders into modern global value chains since the peak in global agro commodity prices in 2007-08 interest in agriculture has increased again among policymakers and in the private sector modern global value chains provide opportunities for smallholder farmers but also increasingly dictate conditions in terms of production practices and thereby determine conditions for inclusion the Indonesian oil palm sector provides an interesting case regarding smallholder inclusion in modern global value chains and the role they play in sustainable agro commodity production palm oil production in Indonesia has thrived due to insertion in global value chains experienced massive smallholder engagement faces considerable sustainability challenges and illustrates the impacts sustainability initiatives can have on smallholders it thus provides a promising case to further explore the nexus of sustainable and inclusive development smallholder agriculture and policy the primary aim of this book is to advance the understanding of how the oil palm sector can be made more sustainable and inclusive it does so by exploring independent and organized oil palm smallholders in Sumatra explaining their emergence and performance and discussing strategies to improve their performance whereas the smallholder oil palm sector clearly has its unique characteristics this book unpicks some stereotypical views on smallholders and highlights the dynamics impacting farmers organizations over time and thereby contributes to debates on the future of farming

this paper analyses the environmental socioeconomic and cultural impacts of oil palm development in the Prafi plain of Manokwari district in West Papua province this analysis is based on interviews and focus group discussions conducted in January-August 2011 a literature survey and analysis of Landsat images of the region the research findings indicate that oil palm cultivation brings significant benefits such as infrastructure development higher incomes for local stakeholders and broader opportunities for customary communities however the large number of immigrant workers brought in to work on the plantation estate are a source of conflict with the local population oil palm development has had adverse environmental impacts as it has resulted in the deforestation of about 60% of the Prafi watershed it has also caused soil erosion poor water quality and air pollution to avoid additional adverse impacts the development and expansion of oil palm estates should focus on replanting old plantation areas with high yield varieties and planting on non-forested and degraded land special land zones should be set aside for the indigenous Arfak people to use for subsistence farming additional efforts should be made to ensure that local communities receive proper compensation for the loss of use of their traditional lands increasing transparency in land allocation stricter supervision of plantation operations and sanctions for non-compliance with sustainability standards are of utmost importance

there are about 2 million smallholders cultivating 40% of indonesia's oil palm area they require significant financing to establish maintain and replant their oil palm plantations in order to both increase productivity and improve the quality of the fresh fruit bunches their capacity to self finance their plantation is limited however most of them are credit constrained since the late 1970s the government of indonesia has introduced a number of credit schemes for oil palm smallholders banks and other formal institutions have also been offering various credit schemes in terms of the amount grace period and requirements for smallholders both individually or in groups through interviews and focus group discussions in two districts each in south sumatra and central kalimantan we found four gaps 1 demand supply gaps 2 maturity gaps 3 risk sharing gaps and 4 legal gaps demand supply gaps exist where credit applications by oil palm smallholders were not approved because of issues related to collateral requirements credit amounts and crop gestation periods maturity gaps exist when only few financing schemes consider a grace period for smallholders to wait for the first harvest risk sharing gaps refer to the volatility in production costs and palm oil prices that smallholders have to bear many smallholders do not hold proper documentation which leads to the legal gaps that prevent them from using their land as collateral to access credit from banks these gaps reduce the possibility of smallholders accessing credit from formal institutions which drives an informal local lending market with limited credit amounts and higher interest rates the government and financial institutions must address these gaps in order to improve formal credit access for smallholder oil palm farmers
