the objective of this book is to assist scientists and engineers select the ideal material or manufacturing process for particular applications these could cover a wide range of fields from

light weight structures to electronic hardware the book will help in problem solving as it also presents more than 100 case studies and failure investigations from the space sector that can by analogy be applied to other industries difficult to find material data is included for reference the sciences of metallic primarily and organic materials presented throughout the book demonstrate how they can be applied as an integral part of spacecraft product assurance schemes which involve quality material and processes evaluations and the selection of mechanical and component parts in this successor edition which has been revised and updated engineering problems associated with critical spacecraft hardware and the space environment are highlighted by over 500 illustrations including micrographs and fractographs space hardware captured by astronauts and returned to earth from long durations in space are examined information detailed in the handbook is applicable to general terrestrial applications including consumer electronics as well as high reliability systems associated with aeronautics medical equipment and ground transportation this handbook is also directed to those involved in maximizing the reliability of new materials and processes for space technology and space engineering it will be invaluable to engineers concerned with the construction of advanced structures or mechanical and electronic sub systems

this book gathers a selection of peer reviewed papers presented at the 2nd international conference on experimental and computational mechanics in engineering icecme 2020 held as a virtual conference and organized by universitas syiah kuala banda aceh indonesia on 13 14 october 2020 the contributions prepared by international scientists and engineers cover the latest advances in computational mechanics metallurgy and material science energy systems manufacturing processing systems industrial and system engineering biomechanics artificial intelligence micro nano engineering micro electro mechanical system machine learning mechatronics and engineering design the book is intended for academics including graduate students and researchers as well as industrial practitioners working in the areas of experimental and computational mechanics
