the common core curriculum is designed to make students better readers writers listeners and critical thinkers this volume fulfills that mandate by teaching readers how to assess if an argument's reasoning is sound and the evidence presented is valid relevant and sufficient identifying both the strengths and weaknesses of an argument along with an author's point of view and possible intentions or agenda students become better able to separate fact from opinion and reality from spin they form educated opinions and become better more persuasive presenters of their own arguments

reprint of the original first published in 1875

no detailed description available for dialectics and the macrostructure of arguments

what precisely does the word hermeneutics mean and in what sense can one speak of the hermeneutics of original argument the author explores these questions in order to build upon heidegger's hermeneutical thought

this book presents the historical theoretical and empirical foundations of educational practices involving dialogue and argumentation

the primary focus of the updated second edition has not changed it embraces the narrative or storytelling approach to the study of argumentation the first section introduces readers to rhetorical theorists and their principles these significant contributions to the field of argumentation and debate include aristotle's views on audiences and the ethical character of an advocate burke's dramaturgical theory of communication brockriedes metaphorical image of arguers fisher's narrative paradigm mills guidelines for testing the causal correlation perelman and olbrechts-Tyteca's conception of a universal audience rokeach's definition of values and toulmin's model for developing and analyzing argument claims and his conception of arguments as field dependent hollihan and baackes discussions of these ideas and their applications are easy to follow unencumbered by technical jargon and illustrated with engaging examples drawn from current and well known historical events the key to the success of this text is the author's ability to show readers how foundational principles of argumentation are used in a variety of real world situations the second section covers specialized contexts such as academic debates courts of law politics business and organizations and interpersonal relationships activities that stimulate critical thinking and the implementation of the ideas discussed are provided at the end of each chapter

the investigation of computational models of argument is a rich and fascinating interdisciplinary research field with two ultimate aims the theoretical goal of understanding argumentation as a cognitive phenomenon by modeling it in computer programs and the practical goal of supporting the development of computer based systems able to engage in argumentation related activities with human users or among themselves the biennial international conferences on computational models of argument comma provide a dedicated forum for the presentation and discussion of the latest advancements in the field and cover both basic research and innovative applications this book presents the proceedings of comma 2020 due to the covid 19 pandemic comma 2020 was held as an online event on the originally scheduled dates of 8 11 september 2020 organised by the university of perugia italy the book includes 28 full papers and 13 short papers selected from a total of 78 submissions the abstracts of 3 invited talks and 13 demonstration abstracts the interdisciplinary nature of the field is reflected and contributions cover both theory and practice theoretical contributions include new formal models the study of formal or computational properties of models designs for implemented systems and experimental research practical papers include applications to medicine law and criminal investigation chatbots and online product reviews the argument mining trend from previous comma s is continued while an emerging trend this year is the use of argumentation for explainable ai the book provided an overview of the latest work on computational models of argument and will be of interest to all those working in the field

this festschrift volume has been published to celebrate the lifelong scientific achievements of farhad arbab on the occasion of his retirement from the centre of mathematics and computer science cwi over the years farhad arbab has sucessfully been

engaged in scientific explorations in various directions software composition service oriented computing component based software concurrency theory coordination models and languages parallel and distributed computing visual programming environments constraints logic and object oriented programming farhad arbab has shaped the field of coordination models and languages his insight that it is all about exogenous coordination gave rise to the striking elegance and beauty of reo an exogenous coordination model based on a formal calculus of channel composition reo has been extremely successful and is having a great impact in many of the areas mentioned above the present volume collects a number of papers by several of farhad s close collaborators over the years

over the last twenty or so years it has become standard to require policy makers to base their recommendations on evidence that is now uncontroversial to the point of triviality of course policy should be based on the facts but are the methods that policy makers rely on to gather and analyze evidence the right ones in evidence based policy nancy cartwright an eminent scholar and jeremy hardie who has had a long and successful career in both business and the economy explain that the dominant methods which are in use now broadly speaking methods that imitate standard practices in medicine like randomized control trials do not work they fail cartwright and hardie contend because they do not enhance our ability to predict if policies will be effective the prevailing methods fall short not just because social science which operates within the domain of real world politics and deals with people differs so much from the natural science milieu of the lab rather there are principled reasons why the advice for crafting and implementing policy now on offer will lead to bad results current guides in use tend to rank scientific methods according to the degree of trustworthiness of the evidence they produce that is valuable in certain respects but such approaches offer little advice about how to think about putting such evidence to use evidence based policy focuses on showing policymakers how to effectively use evidence it also explains what types of information are most necessary for making reliable policy and offers lessons on how to organize that information

relevant to and drawing from a range of disciplines the chapters in this collection show the diversity and applicability of research in bayesian argumentation together they form a challenge to philosophers versed in both the use and criticism of bayesian models who have largely overlooked their potential in argumentation selected from contributions to a multidisciplinary workshop on the topic held in sweden in 2010 the authors count linguists and social psychologists among their number in addition to philosophers they analyze material that includes real life court cases experimental research results and the insights gained from computer models the volume provides for the first time a formal measure of subjective argument strength and

argument force robust enough to allow advocates of opposing sides of an argument to agree on the relative strengths of their supporting reasoning with papers from leading figures such as Michael Oaksford and Ulrike Hahn the book comprises recent research conducted at the frontiers of Bayesian argumentation and provides a multitude of examples in which these formal tools can be applied to informal argument it signals new and impending developments in philosophy which has seen Bayesian models deployed in formal epistemology and philosophy of science but has yet to explore the full potential of Bayesian models as a framework in argumentation in doing so this revealing anthology looks destined to become a standard teaching text in years to come

in an era of information overload our need to learn how to critically evaluate the growing flood of information has never been greater critical reflection showcases the role of reason in a world saturated by media enhanced persuasion and complex scientific and technological jargon drawing from the classic philosophical texts this engaging textbook on the art of analyzing arguments is also relevant to today's undergraduates in its use of real life examples and exercises drawn mainly from media and politics Malcolm Murray and Nebojsa Kujundzic cover the standard subjects in a one semester course on critical thinking offering ways to analyze arguments in the following areas language use acceptability conditions for truth categorical and propositional logic induction causal claims probability reasoning analogical reasoning an in depth analysis of informal fallacies critical reflection further distinguishes itself with in depth answers to chapter exercises that are incorporated directly into the authors detailed discussions this is an ideal textbook to help professors foster autonomous thinking among their students

a fortiori logic innovations history and assessments by Avi Sion is a wide ranging and in depth study of a fortiori reasoning comprising a great many new theoretical insights into such argument a history of its use and discussion from antiquity to the present day and critical analyses of the main attempts at its elucidation its purpose is nothing less than to lay the foundations for a new branch of logic and greatly develop it and thus to once and for all dispel the many fallacious ideas circulating regarding the nature of a fortiori reasoning

this book presents reflections on the relationship between narratives and argumentative discourse it focuses on their functional and structural similarities or dissimilarities and offers diverse perspectives and conceptual tools for analyzing the narratives potential power for justification explanation and persuasion divided into two sections the first part under the title narratives as sources of knowledge and argument includes five chapters addressing rather general theoretical and characteristically philosophical issues related to the argumentative analysis and understanding of narratives we may perceive here how scholars in

argumentation theory have recently approached certain topics that have a close connection with mainstream discussions in epistemology and the cognitive sciences about the justificatory potential of narratives the second part entitled argumentative narratives in context brings us six more chapters that concentrate on either particular functions played by argumentatively oriented narratives or particular practices that may benefit from the use of special kinds of narratives here the focus is either on the detailed analysis of contextualized examples of narratives with argumentative qualities or on the careful understanding of the particular demands of certain well defined situated activities as diverse as scientific theorizing or war policing that may be satisfied by certain uses of narrative discourse

logic is the skill that enables humans to think clearly accurately and rigorously and so to draw only the inferences that the evidence warrants some people like scientists engineers mathematicians and computer programmers get plenty of on the job practice in thinking logically the rest of us generally don't in this accessible concise yet comprehensive introduction to a sometimes formidable subject philosopher keith parsons presents elementary topics in logic for people who have little background in mathematics or science and have no career goals in those fields parsons presupposes no specialized background and strives to introduce even abstract concepts in an intuitive and unthreatening way his informal conversational style leads the reader painlessly even entertainingly through three essential areas of logic the first part of the book deals with sentential and predicate logic as well as inductive and scientific reasoning including inference to the best explanation the second part explains basic probability bayes theorem and why thinking about probability is so prone to error and illusion the third part considers informal reasoning and critical thinking including such topics as rhetoric fallacies political spin and the detection of pseudoscience and pseudohistory why be logical even if you're a poet an artist or just a free spirit logic can help you determine the facts behind the political propaganda religious claims advertising and sales talk that we are all subjected to as a logically literate person you will be a better informed citizen wiser consumer and a clearer thinker
