electroplating and metal finishing concerns itself with the development and applications of composites and non metallic coatings these coatings are used for decorative protective and functional application some of the other common metal surface finishing technologies are phosphating pickling electroforming powder coating etc electroplating is the process of applying a metallic coating to an article by passing an electric current through an electrolyte in contact with the article thereby forming a surface having properties or dimensions different from those of the article metal finishing has now come to be known as surface engineering surface engineering techniques are generally used to develop a wide range of functional properties in addition to the decorative aspects metal finishing aids the protection of metals and alloys from corrosion and rusting a great potential exists for development of new materials involving for example coatings of metals composites particle incorporated anodic coatings and even films of sapphire like materials porous films of niobium etc and coating of refractory metals like molybdenum and tungsten phosphate coatings have a wide field of application in manufacturing industry both as an aid to mechanical production operations and in surface finishing the major applications for phosphate treatments fall into four areas pre treatment prior to organic coatings protection against corrosion anti wear coatings and phosphating as a production aid powder coating of aluminium extrusions in particular has become an important feature in the finishing of aluminium there are several advantages of powder powder coating overspray can be recycled and thus it is possible to achieve nearly 100 use of the coating powder coating production lines produce less hazardous waste than conventional liquid coatings capital equipment and operating costs for a powder line are generally less than for conventional liquid lines surface finishing is a broad range of industrial processes that alter the surface of a manufactured item to achieve a certain property currently the trend is towards surface treatments industries in developing countries like india have to be increasingly aware of the need not only for up gradation of existing technologies but also for indigenization of new technologies on a time bound basis the content of the book includes information about technology involved in surface engineering of metals some of them are electroplating plant barrel plating plant electroplating equipment cleaning pickling and dipping equipment for hot alkaline cleaners electrolytic and chemical processes for the polishing of metals canning stainless steel

remarkable progress has been made in the last two decades in the study of concentrated polymer solutions leading to many new concepts theories and techniques in the field of polymer science any description of the theory of polymer solutions is now insufficient unless both concentrated and dilute solutions are given equal attention this book reviews recent developments in the study of dilute and concentrated polymer solutions emphasizing mainly the typical equilibrium and steady state dynamic properties of linear homopolymers the author strives to clarify the gap which still remains open between current theories and well documented experimental results thereby stimulating further efforts toward a more accurate understanding of polymer solutions the book contains a collection of typical experimental data and their comparison with current theories molecular or phenomenological a summary of recent advances in the physics of concentrated polymer solutions and melts and an elementary account of the renormalization group theory as applied to dilute solutions polymer solutions should prove invaluable as a reference work for graduate students and specialists in this field

integrated drug discovery technologies provides a global overview of emerging drug development technologies by presenting and integrating new techniques from the disciplines of chemistry biology and computational sciences it combines integration of contemporary mechanization with strategies in drug delivery topics include functional genomics microfabrication techniques integrated proteomics technologies high throughput screening and fluorescence correlation spectroscopy methods

although several monographs and reviews have appeared on individual polymers of this type and their applications and other technical aspects have also been discussed this is apparently the first book to

deal with the physical chemistry of water soluble synthetic polymers as a group this collective survey enables their properties and behaviour to be compared and to be correlated with their molecular structures for predictive purposes however this has made it necessary to critically re appraise much of the earlier fundamental work so that current discussion of more recent work can be put on a proper basis thus of the 1800 or so references cited the middle two thirds related to the twenty year period centred on about 1968 nevertheless sufficient key recent references have also been included so that the existing state of the art is delineated

the textbook begins with exercises related to radioactive sources and decay schemes the problems covered include series decay and how to determine the frequency and energy of emitted particles in disintegrations the next chapter deals with the interaction of ionizing radiation including the treatment of photons and charged particles the main focus is on applications based on the knowledge of interaction to be used in subsequent work and courses the textbook then examines detectors and measurements including both counting statistics and properties of pulse detectors the chapter that follows is dedicated to dosimetry which is a major subject in medical radiation physics it covers theoretical applications such as different equilibrium situations and cavity theories as well as experimental dosimetry including ionization chambers and solid state and liquid dosimeters a shorter chapter deals with radiobiology where different cell survival models are considered the last chapter concerns radiation protection and health physics both radioecology and radiation shielding calculations are covered the textbook includes tables to simplify the solutions of the exercises but the reader is mainly referred to important websites for importing necessary data

this is an open access title available under the terms of a cc by nc nd 4 0 license it is free to read download and share on elgaronline com nature based solutions nbs are increasingly being adopted to address climate change health and urban sustainability yet ensuring they are effective and inclusive remains a challenge addressing these challenges through chapters by leading experts in both global south and north contexts this forward looking book advances the science of nbs in cities and discusses the frontiers for next generation urban nbs
