recognising the fact that a level mathematics is no longer a necessary prerequisite for economics courses this text introduces this key subdivision of economics to an audience who might otherwise have been deterred by its complexity

interactions between people are ubiquitous when people make phone calls transfer money connect on social network sites or visit each other these actions can be collected as dyadic directed relational events each of those events can be understood as driven by multiple individual decisions that at least partially involve rational considerations this book aims at developing models that allow to understand individual event decisions in the context of large social networks

cities play a vital role in economic growth and prosperity sustainable development of cities largely depends upon their physical social and institutional infrastructure in this context the importance of transportation system is paramount urban transportation is probably the single most important component instrumental in shaping urban development and urban living while urban areas may be viewed as engines of growth urban transport is figuratively and literally the wheel of that engine as cities expand to the point where walking can no longer satisfy the mobility requirements of the people public transport becomes the major mode of transportation until recently the main function of public transport was to satisfy the individual needs of the less affluent members of the society now it is required to attract all segments of the society to provide congestion relief and environmental preservation productivity improvement and efficiency in the public transport system must be concerned not only with keeping costs

down but also with providing a flexible framework within which all income groups can use public transport with confidence and convenience
