the following points are developed first mediation relations are generally thought of in causal terms influences of an antecedent are transmitted to a consequence through an intervening mediator second mediation relations may assume a number of functional forms including nonadditive nonlinear and nonrecursive forms special attention is given to nonadditive forms or moderated mediation where it is shown that while mediation and moderation are distinguishable processes a particular variable may be both a mediator and a moderator within a single set of functional relations third current procedures for testing mediation relations in industrial and organizational psychology need to be updated because these procedures often involve a dubious interplay between exploratory correlational statistical tests and causal inference it is suggested that no middle ground exists between exploratory and confirmatory causal analysis and that attempts to explain how mediation processes occur require well specified causal models given such models confirmatory analytic techniques furnish the more informative tests of mediation author
