the world wide has become a ubiquitous global tool used for finding information communicating ideas carrying out distributed computation and conducting business learning and science the is highly dynamic in both the content and quantity of the information that it encompasses in order to fully exploit its enormous potential as a global repository of information we need to understand how its size topology and content are evolving this then allows the development of new techniques for locating and retrieving information that are better able to adapt and scale to its change and growth

the users are highly diverse and can access the from a variety of devices and interfaces at different places and times and for varying purposes we thus also need techniques for personalising the presentation and content of based information depending on how it is being accessed and on the specific user s requirements as well as being accessed by human users the is also accessed by applications new applications in areas such as e business sensor networks and mobile and ubiquitous computing need to be able to detect and react quickly to events and changes in based information traditional approaches using query based pull of information to find out if events or changes of interest have occurred may not be able to scale to the quantity and frequency of events and changes being generated and new push based techniques are needed

engineering technology development and implementation play an important role in making the industry more sustainable in an increasingly competitive world this book covers significant recent developments in both fundamental and applied research in the engineering field domains of application include but are not limited to intelligent control systems and optimization signal processing sensors systems modeling and control robotics and automation industrial and electric engineering production and management this book is an excellent reference work to get up to date with the latest research and developments in the fields of automation mechatronics and industrial engineering it aims to provide a platform for researchers and professionals in all relevant fields to gain new ideas and establish great achievements in scientific development

welcome to ecdl 2003 and to these conference proceedings featuring all the papers presented at the 7th european conference on research and advanced technology for digital libraries following pisa 1997 heraklion 1998 paris 1999 lisbon 2000 da stadt 2001 and rome 2002 ecdl 2003 in trondheim reaches some of the northernmost shores of the continent being the seventh in an annual series of conferences represents for better and for worse a considerable tradition in the fast changing world of digit library related research and development it is still a di cult and slow job to change traditional forms and formats of communication at and related to scienti c conferences and also to change participants expectations yet each new conference builds upon the topics and communities involved

in previous events and inherits the commitment to quality established by its predecessors each year ecdl has to live up to its role of being the major european forum focusing on digital libraries and associated technical practical and social issues bringing diverse disciplines and application communities together there are still challenges in this respect ahead of us but the quality and range of papers and other contributions combined with opportunities for debate should ensure that ecdl 2003 sets high standards for the future
