there is no shortage of articles and books exploring women s underrepresentation in science
everyone is interested academics politicians parents high school girls and boys women in search of
college majors administrators working to accommodate women s educational interests the list goes
on but one thing often missing is an evidence based examination of the problem uninfluenced by
personal opinions accounts of lived experiences anecdotes and the always encroaching inputs of
popular culture this is why this special issue of frontiers in psychology can make a difference in it a
diverse group of authors and researchers with even more diverse viewpoints find themselves united
by their empirical objective approaches to understanding women s underrepresentation in science
today the questions considered within this special issue span academic disciplines methods levels
of analysis and nature of analysis what these article share is their scholarly evidence based
approach to understanding a key issue of our time

this book contains a selection of the improved contributions submitted by participants at the
conference of the italian statistical society sis 2022 held in caserta 22 24 june 2022 the scientific
community of italian statistics which gathers around the sis is paying particular attention to the
development of statistical techniques increasingly oriented toward the processing of large data
mainly of complex data the main goal is to provide the analysis of the data and the interpretability of
the obtained results with a view to decision support and the reliability of the data outcomes the aim
of this volume is to show some of the most relevant contributions of statistical and data analysis

methods in preserving the quality of the information to be processed especially when it comes from different often non official sources as well as in the extraction of knowledge from complex data textual network unstructured and multivalued and in the explicability of results data science today represents a broad domain of knowledge development from data where statistical and data analysis methods can make an important contribution in the different domains where data management and processing are required this volume is addressed to researchers but also to ph d and msc students in the field of statistics and data science to acquaint them with some of the most recent developments towards which statistical research is orienting in prevalence in Italy

work at the biology bench requires an ever increasing knowledge of mathematical methods and formulae this is a compilation of the most common mathematical concepts and methods in molecular biology with clear straightforward guidance on their application to research investigations

work at the biology bench requires an ever increasing knowledge of mathematical methods and formulae in lab math dany spencer adams has compiled the most common mathematical concepts and methods in molecular biology and provided clear straightforward guidance on their application to research investigations subjects range from basics such as scientific notation and complex activities like quantifying and designing nucleic acids and analysing protein activity tips on how to present mathematical data and statistical analysis are included a reference section features useful tables conversion charts and equations for experimental procedures this volume is an excellent structured source of information that in many laboratories is often scattered and informally organized

living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies thus numerical development is at the core of both individual as well as societal interests there is the notion that we are already born with a very basic ability to deal with small numerosities yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints during our numerical development in formal e.g. school but also informal contexts e.g. family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and arabic digits refining our numerical capabilities in recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain in sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well in the end this knowledge might also

lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities therefore this research topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations to this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers
