there is a great disparity between the ability of the major industrial nations to produce and distribute chemicals and our ability to comprehend the nature and potential severity of unintended consequences for man his life support systems and the environment generally furthermore the gap between our ability to produce and distribute myriad chemicals and our ability to identify understand or predict unfavorable environmental impacts may widen as environmental scientists we are conscious of the interrelatedness not only of environmental systems but of nations as well materials are continually moved across boundaries by human as well as natural agencies the extent rate and nature of transfer for most pollutants is largely unknown we can only guess which of the numerous chemicals produced are candidates for concern more important still is our practical ignorance of the mechanisms of chronic effects upon natural systems and of the concentrations combinations and circumstances that may lead to irreversibilities or to serious consequences for man we know very little also regarding the potential for or the kinds of indirect effects that might occur with respect to the environment itself we know little of its assimilative capacity with regard to widely dispersed pollutants and their transformation products but what we do know is disquieting and a much improved system for the evaluation and management of toxic and hazardous chemicals is needed

m j schwuger the environmental specimen bank is a repository of representative environ

mental specimens for safe long term storage over decades and centuries without any chemical change in the constituents it represents the modern form of a systematically designed collection which will permit comparative analyses and evaluations of chemicals in the future the aims are the determination of selected chemical compounds at the time of storage comparative investigations with new methods for chemicals which at the time of storage could not be determined or were not recognized as important observation of trends in the environment using authentic material from the past and documentation of long term changes environmental specimen banking is thus suitable for identifying environmental changes and initiating necessary measures of remediation it may be used to identify problems study correlations between cause and effect and determine the effectiveness of legislative measures as well as to recommend the activities required this is not only ecologically important but also relevant for man since he is the last member in the food chain and is therefore affected by all compartments of the environment for this reason two banking systems were established in germany one for environmental specimens jilich and the other for human specimens miinster

financial crises are recurring phenomena that result in the financial distress of systemically important banks making it imperative to understand how to best respond to such crises and their consequences two policy responses became prominent for dealing with these distressed institutions since the last global financial crisis bailouts and bail ins the main questions surrounding these responses touch everyone are bailouts or bail ins good for the financial system and the real economy is it essential to save distressed financial institutions by putting taxpayer money at risk in bailouts or is it better to use private money in bail ins instead are there better options such as first lines of defense that help prevent such distress in the first place can countercyclical prudential and monetary policies lessen the likelihood and severity of the financial crises that often bring about this distress through careful analysis authors berger and roman review and critically assess the extant theoretical and empirical research on many resolution approaches and tools placing special emphasis on lessons learned from one of the biggest bailouts of all time the troubled asset relief program tarp while also reviewing other programs and tools tarp and other bank bailouts and bail ins around the world sheds light on how best to protect the financial system on wall street and the real economy on main street presents a well informed and rich account of bailouts bail ins and other resolution

approaches to resolve financially distressed banks uses tarp as a key case study of bailouts that has been thoroughly researched provides valuable research and policy guidance for dealing with future financial crises

the paper analyzes the relationship between bank competition and stability with a specific focus on the middle east and north africa price competition has a positive effect on bank liquidity as it induces self discipline incentives on banks for the choice of bank funding sources and for the holding of liquid assets on the other hand price competition may have a potentially negative impact on bank solvency and on the credit quality of the loan portfolio more competitive banks may be less solvent if the potential increase in the equity base due to capital adjustments is not large enough to compensate for the reduction in bank profitability also banks subject to stronger competitive pressures may have a higher rate of nonperforming loans if the increase in the risk taking incentives from the lender s side overcomes the decrease in the credit risk from the borrower s side in both cases country specific policies for market entry conditions and for bank regulation and supervision may significantly affect the sign and the size of the relationship the paper suggests policy reforms designed to improve market contestability and to increase the quality and independence of prudential supervision
