the year 2001 marks the centenary of biometrika one of the world s leading academic journals in statistical theory and methodology in celebration of this the book brings together two sets of papers from the journal the first are specially commissioned articles that review the history of the journal and the most important contributions made by papers in the journal to a number of important areas of statistical activity including general theory and methodology surveys and time series the second group are a selection of particularly seminal articles from the journal s first hundred years in the process these papers give a full description of the general development of statistical science during the twentieth century

first multi year cumulation covers six years 1965 70

boyd s textbook makes pathology easy to understand and interesting to learn through its unique

and inimitable style of presentation this is a friendly and standard text that has served the needs of many generations of students and faculties across many countries the tenth edition retains the original style and flavour of boyd while presenting a contemporary and updated exposition of pathology

written for introductory marketing classes this text explains what information is needed to plan and implement a successful marketing campaign and how to find that data including details on finding such relevant facts as the size of a potential market the shopping and buying habits of consumers in that market and the competitive and environmental factors that may affect a campaign this primer will guide readers to become savvy marketing managers

the analysis of variance anova models have become one of the most widely used tools of modern statistics for analyzing multifactor data the anova models provide versatile statistical tools for studying the relationship between a dependent variable and one or more independent variables the anova models are employed to determine whether different variables interact and which factors or factor combinations are most important they are appealing because they provide a conceptually simple technique for investigating statistical relationships among different independent variables known as factors currently there are several texts and monographs available on the subject however some of them such as those of scheffe 1959 and fisher and mcdonald 1978 are written for mathematically advanced readers requiring a good background in calculus matrix algebra and statistical theory whereas others such as guenther 1964 huitson 1971 and dunn and clark 1987 although they assume only a background in elementary algebra and statistics treat the subject somewhat scantily and provide only a superficial discussion of the random and mixed effects analysis of variance

includes part 1 number 1 books and pamphlets including serials and contributions to periodicals
