in recent years tropical forests have received more attention and have been the subject of greater environmental concern than any other kind of vegetation there is an increasing public awareness of the importance of these forests not only as a diminishing source of countless products used by mankind nor for their effects on soil stabilization and climate but as unrivalled sources of what today we call biodiversity threats to the continued existence of the forests represent threats to tens of thousands of species of organisms both plants and animals it is all the more surprising therefore that there have been no major scientific accounts published in recent years since the classic handbook by paul w richards the tropical rain forest in 1952 some excellent popular accounts of tropical rain forests have been published including paul richard s the life of the jungle and catherine caulfield s in the rainforest and jungles edited by edward ayensu there have been numerous often conflicting assessments of the rate of conversion of tropical forests to other uses and explanations of the underlying causes and in 1978 unesco unepi fao published a massive report the tropical rain forest which although full of useful information is highly selective and does not fully survey the enormous diversity of the forests

the work of cuban poet gaston baquero has been largely unavailable now thanks to translators greg simon and steven white we have a rich sampling that will provide english speakers a powerful display of baquero's high velocity lyricism playful sinuous with both gladness and duende these poems speak profoundly of the spirit's essential freedom and mystery and of what it meant to be human in the twentieth century born in banes cuba in 1918 gaston baquero was raised in rural poverty and trained as an agronomist before becoming a journalist he was involved in all the most important cuban literary journals of the mid century including origenes he left cuba immediately

after the revolution of 1959 spending the rest of his life in Spain where he died in 1997. Baquero published numerous essays and eight collections of poetry although officially nonexistent in Cuba for many years his work is widely known there and he was recently officially acknowledged as one of the country's major poets.

The main subject discussed in this study is the way in which the ancient Maya of Calakmul, modern Mexico, who thrived between 900 B.C. to A.D. 1000 managed their landscape in order to survive in the tropical rainforest. Their lithic technology, the hot humid climate with a prolonged dry season, the lack of permanent surface sources of fresh water and thin soils considered insufficient for sustained agricultural production are factors that were addressed successfully by the Maya in developing their complex civilization. The author's research begins with landscape archaeological and edaphological analyses after which she explores the areas most advantageous to permanent habitation, suitable agricultural zones, land potential of the region and the capability of the area for supporting population. In addition, a complex agricultural channel irrigation system is explored as a critical factor for managing productive terrain for agriculture in karstic depressions (bajos). Similarly, an impressive rain harvesting system is exposed as an option to optimize hydrological resources for canalizing excessive rain during the wet season and storing water during the dry period. Finally, a reconstruction of the agricultural landscape is proposed.

Provides information relevant to living in a rain forest such as ways to earn a living, various types of rain forests, diverse peoples and their habitats and issues related to exploitation and conservation.
