defense of scientific hypothesis from reproducibility crisis to big data sets out to explain and defend the scientific hypothesis alger s mission is to counteract the misinformation and misunderstanding about the hypothesis that even seasoned scientists have concerning its nature and place in modern science most

biological scientists receive little or no formal training in scientific thinking further the hypothesis is under attack by critics who claim that it is irrelevant to science in order to appreciate and evaluate scientific controversies like global climate change vaccine safety etc the public first needs to understand the hypothesis defense of scientific hypothesis begins by describing and analyzing the scientific hypothesis in depth and examining its relationships to various kinds of science alger then guides readers through a review of the hypothesis in the context of the reproducibility crisis and presents survey data on how scientists perceive and employ hypotheses he assesses cognitive factors that influence our ability to use the hypothesis and makes practical and policy recommendations for teaching and learning about it finally alger considers two possible futures of the hypothesis in science as the big data revolution looms in one scenario the hypothesis is displaced by the big data mindset that forgoes understanding in favor of correlation and prediction in the other robotic science incorporates the hypotheses into mechanized laboratories guided by artificial intelligence but in his illuminating epilogue alger envisions a third way the centaur scientist a symbiotic relationship between human scientists and computers

community detection in addition to static networks the book introduces dynamic networks such as epidemics where time is an important component

this book sets out the necessary processes and challenges involved in modeling student thinking understanding and learning the chapters look at the centrality of models for knowledge claims in science education and explore the modeling of mental processes knowledge cognitive development and conceptual learning the conclusion outlines significant implications for science teachers and those researching in this field this highly useful work provides models of scientific thinking from different field and analyses the processes by which we can arrive at claims about the minds of others the author highlights the logical impossibility of ever knowing for sure what someone else knows understands or thinks and makes the case that researchers in science education need to be much more explicit about the extent to which research onto learners ideas in science is necessarily a process of developing models through this book we learn that research reports should acknowledge the role of modeling and avoid making claims that are much less tentative than is justified as this can lead to misleading and sometimes contrary findings in the literature in everyday life we commonly take it for granted that finding out what another knows or thinks is a relatively trivial or straightforward process we come to take the mental register the way we talk about the contents of minds for granted and so teachers and researchers may readily underestimate the challenges involved in their work

integrating converging evidence in behavioral sciences presents a fresh approach to understanding the landscape of scientific research particularly within the behavioral sciences by examining the needs for consistency and coherence across different scientific disciplines this book offers readers a practical framework for evaluating and advancing their research topics through a comprehensive overview of established frameworks such as Marr's computational framework and Tinbergen's four questions the book introduces a novel convergence framework specifically tailored to the behavioral sciences this approach enables a more integrated view of scientific theories and knowledge empowers researchers to pinpoint areas of high impact and helps them to recognize potential revolutions in the field the book serves a dual purpose as a rubric for students and early career researchers to grasp and navigate their research topics and also as a resource for more advanced researchers seeking to delve into deeper issues and apply the framework across different contexts this book is an essential guide for anyone interested in harmonizing scientific perspectives developing more robust and interconnected fields of research and potentially paving the way for groundbreaking discoveries

handbook of decision making includes the wisdom of the long theological and philosophical traditions of human society as well as a systematic exploration of the implications of contemporary evolutionary theories common patterns in decision making styles are identified as well as the common variations that different contexts may generate the text covers the multiplicity of mainstream decision making styles such as cost benefit analysis and linear programming it also explains alternative and emerging methods such as geographic information systems q methodology and narrative policy analysis practical applications are discussed using decision making practices in budgeting public administration and governance drug trafficking and information systems
