it has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events it is not that the facts of history have changed no one will dispute that the battle of waterloo occurred on june 11 1815 or that the allied invasion of europe began on june 6 1944 what each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation by examining the facts of history from a new perspective today s historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today s organizational cultural and economic realities hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities

many people look upon a microscope as a mere instrument but to them microscopy is instrumentation other people consider a microscope to be simply an aid to the eye to them microscopy is primarily an extension of macroscopy in actuality microscopy is both objective and subjective it is seeing through an instrument by means of the eye and more importantly the brain the function of the brain is to interpret the eye's image in terms of the object's structure thought and experience are required to distinguish structure from artifact it is said that Galileo 1564 1642 had his associates first look through his telescope microscope at very familiar objects to convince them that the image was a true representation of the object then he would have them

proceed to hitherto unknown worlds too far or too small to be seen with the un aided eye since galileo s time light microscopes have been improved so much that performance is now very close to theoretical limits electron microscopes have been developed in the last four decades to exhibit thousands of times the resolving power of the light microscope through the news media everyone is made aware of the marvelous microscopical accomplishments in imagery however little or no hint is given as to what parts of the image are derived from the specimen itself and what parts are from the instrumentation to say nothing of the changes made during preparation of the specimen
