wiring diagrams form a kind of graphical language that describes operations or processes with multiple inputs and outputs and shows how such operations are wired together to form a larger and more complex operation this monograph presents a comprehensive study of the combinatorial structure of the various operads of wiring diagrams their algebras and the relationships between these operads the book proves finite presentation theorems for operads of wiring diagrams as well as their algebras these theorems

describe the operad in terms of just a few operadic generators and a small number of generating relations the author further explores recent trends in the application of operad theory to wiring diagrams and related structures including finite presentations for the propagator algebra the algebra of discrete systems the algebra of open dynamical systems and the relational algebra a partial verification of david spivak's conjecture regarding the quotient freeness of the relational algebra is also provided in the final part the author constructs operad maps between the various operads of wiring diagrams and identifies their images assuming only basic knowledge of algebra combinatorics and set theory this book is aimed at advanced undergraduate and graduate students as well as researchers working in operad theory and its applications numerous illustrations examples and practice exercises are included making this a self contained volume suitable for self study

chapter 1 blueprints when you have read and understood this chapter you should be able to answer the following learning objectives describe blueprints and how they are produced identify the information contained in blueprints explain the proper filing of blueprints blueprints prints are copies of mechanical or other types of technical drawings the term blueprint reading means interpreting ideas expressed by others on drawings whether or not the drawings are actually blueprints drawing or sketching is the universal language used by engineers technicians and skilled craftsmen drawings need to convey all the necessary information to the person who will make or assemble the object in the drawing blueprints show the construction details of parts machines ships aircraft buildings bridges roads and so forth blueprint production original drawings are drawn or traced directly on translucent tracing paper or cloth using black waterproof india ink a pencil or computer aided drafting cad systems the original drawing is a tracing or master copy these copies are rarely if ever sent to a shop or site instead copies of the tracings are given to persons or offices where needed tracings that are properly handled and stored will last indefinitely the term blueprint is used loosely to describe copies of original drawings or tracings one of the first processes developed to duplicate tracings produced white lines on a blue background hence the term blueprint today however other methods produce prints of different colors the colors may be brown black gray or maroon the differences are in the types of paper and developing processes used a patented paper identified as bw paper produces prints with black lines on a white

background the diazo or ammonia process produces prints with either black blue or maroon lines on a white background another type of duplicating process rarely used to reproduce working drawings is the photostatic process in which a large camera reduces or enlarges a tracing or drawing the photostat has white lines on a dark background businesses use this process to incorporate reduced size drawings into reports or records the standards and procedures prescribed for military drawings and blueprints are stated in military standards mil std and american national standards institute ansi standards the department of defense index of specifications and standards lists these standards it is issued on 31 july of each year the following list contains common mil std and ansi standards listed by number and title that concern engineering drawings and blueprints
