when managing cross culturally in a polarized world recognizing similarities between people and establishing common ground can be key to success this book argues that despite differences in language political systems income levels and other factors people are people there is no doubt that cultural differences should be understood and appreciated not only because this is the right thing to do in a multicultural world but because failure to understand these differences when doing business can result in costly mistakes but when managing people what matters most is showing respect and interest because what motivates and de motivates is the same regardless of cultural background this book explains and illustrates eight themes in which people

are very similar across cultures including trust fairness integrity and though often overlooked in an organizational context the reasons why people work business leaders human resource professionals organizational consultants and students in these fields will appreciate this fresh perspective on people management and the mini cases and interviews with senior executives provide inspiring real world examples

1 1 utilitarian theories this book is a monograph on moral philosophy and social philosophy particularly the part of the philosophy of economics that is related to the general distribution problem it presents a comprehensive ethical theory together with an application of the theory to distributive justice the viewpoint of this theory is utilitarian however this theory is different in some crucial points as well as in minor details from all existing forms of utilitarianism moral philosophy deals essentially with the moral judgment of actions i e whether a moral action is right or wrong good or bad the judgment is usually based on a line of logical reasoning which can be traced to a final reason called the justification or ultimate principle an ethical theory is a self consistent system built upon a basic or ultimate principle an ultimate principle can never be rigorously proven and is not unique different philosophers establish different ethical theories upon different principles therefore in the history of development of moral philosophy there have been a large number of ethical theories and schools even within the same school having the same ultimate principle different philosophers may have different versions of the theory because of small variations in the interpretation of the ultimate principle or in the elaboration of the details

this book considers how art actually works how the various art forms connect with the world of ordinary human experience many books approach the subject from the top down through topics such as the nature of beauty the meaning of art aesthetic judgement and so on the present book examines the subject from the ground up so to speak showing how the creation and appreciation of art spring from innate human needs and capacities what we call the arts emerge organically from the habitual activities through which human beings represent the world to themselves and others artistic representation always more than mere imitation is a reaching for the spirit of a subject a revealing of the implicit a refreshing of the overly familiar a key idea is that art is representation through convention that artistic conventions far from inhibiting the work of the artist are vital to artistic creativity
