the monitoring and control of a system whose behaviour is highly uncertain is an important and challenging practical problem methods of solution based on fuzzy techniques have generated considerable interest but very little of the existing literature considers explicit ways of taking uncertainties into account this book describes an approach to the monitoring and control of information poor systems that is based on fuzzy relational models which generate fuzzy outputs the first part of monitoring and control of information poor systems aims to clarify why design decisions must take account of the uncertainty associated with optimal choices and to explain how a fuzzy relational model can be used to generate a fuzzy output which reflects the uncertainties associated with its predictions part two gives a brief introduction to fuzzy decision making and shows how it can be used to design a predictive control scheme that is suitable for controlling information poor systems using inaccurate measurements part three describes different ways in which fuzzy relational models can be generated online and explains the practical issues associated with their identification and application the final part of the book provides examples of the use of the previously described techniques in real applications key features describes techniques applicable to a wide range of engineering environmental medical financial and economic applications uses simple examples to help explain the basic techniques for dealing with uncertainty describes a novel design approach based on the use of fuzzy relational models considers practical issues associated with applying the techniques to real systems monitoring and control of information poor systems forms an invaluable resource for a wide range of graduate students and is also a comprehensive reference for researchers and practitioners working on problems involving mathematical modelling and control

the present volume of the handbook of the history of logic brings together two of the most important developments in 20th century non

classical logic these are many valuedness and non monotonicity on the one approach in deference to vagueness temporal or quantum indeterminacy or reference failure sentences that are classically non bivalent are allowed as inputs and outputs to consequence relations many valued dialethic fuzzy and quantum logics are among other things principled attempts to regulate the flow through of sentences that are neither true nor false on the second or non monotonic approach constraints are placed on inputs and sometimes on outputs of a classical consequence relation with a view to producing a notion of consequence that serves in a more realistic way the requirements of real life inference many valued logics produce an interesting problem non bivalent inputs produce classically valid consequence statements for any choice of outputs a major task of many valued logics of all stripes is to fashion an appropriately non classical relation of consequence the chief preoccupation of non monotonic and default logicians is how to constrain inputs and outputs of the consequence relation in what is called left non monotonicity it is forbidden to add new sentences to the inputs of true consequence statements the restriction takes notice of the fact that new information will sometimes override an antecedently and reasonably derived consequence in what is called right non monotonicity limitations are imposed on outputs of the consequence relation most notably perhaps is the requirement that the rule of or introduction not be given free sway on outputs also prominent is the effort of paraconsistent logicians both preservationist and dialethic to limit the outputs of inconsistent inputs which in classical contexts are wholly unconstrained in some instances our two themes coincide dialethic logics are a case in point dialethic logics allow certain selected sentences to have as a third truth value the classical values of truth and falsity together so such logics also admit classically inconsistent inputs a central task is to construct a right non monotonic consequence relation that allows for these many valued and inconsistent inputs the many valued and non monotonic turn in logic is an indispensable research tool for anyone interested in the development of logic including researchers graduate and senior undergraduate students in logic history of logic mathematics history of mathematics computer science ai linguistics cognitive science argumentation theory and the history of ideas detailed and comprehensive chapters covering the entire range of modal logic contains the latest scholarly discoveries and interpretative insights that answers many questions in the field of logic

entrepreneurial re orientation in the face of crisis is it worth modifying entrepreneurial strategy abstract purpose this article aims to determine how companies in the sme sector modify their business strategies in response to changes in the external environment the research focused on modifications to entrepreneurial strategies expressed through the fundamental dimensions of entrepreneurial orientation eo risk taking innovativeness and proactiveness additionally it identified which types of reactions modifications in strategies lead to the most favorable changes in firm performance the external environment was determined based on the market situation that resulted from the emergence of the covid 19 pandemic methodology this is quantitative research the study utilized data from 126 small printing businesses operating throughout poland analyses were conducted on the data that reflected modifications in entrepreneurial behaviors and performance during three periods the pre crisis period the initial phase of the crisis the full lockdown period and the second phase of the crisis the period of easing the restrictions the identification of the behavior types was carried out using cluster analysis findings the results of the research led to the conclusion that with a change in market conditions companies significantly change their levels of eo in particular the surveyed companies reduced their levels of eo during the outbreak of the covid 19 pandemic at the same time this decrease was mainly due to significant decreases in risk taking the levels of eo increased when the conditions improved due to significant increases in innovativeness and proactiveness moreover the analysis enabled the identification of four types of reactions to the emergence of the crisis as well as three types of reactions to the improvement of the external conditions that resulted from the easing of restrictions and the introduction of anti crisis support measures for businesses additionally it was demonstrated that the type of reaction had a significant impact on the changes in the performances of the examined companies in particular it was shown that the lowest decline in performance during the initial phase of crisis could be observed in passive enterprises i e those that did not modify their entrepreneurial strategies did not alter their levels of individual dimensions of eo the greatest increase in performance was achieved during the period of easing restrictions by those companies that significantly enhanced their activities across all of the considered dimensions of eo implications the research results provided insights for entrepreneurs in strategic management specifically they learned about the modifications in entrepreneurial behaviors to changes in market conditions this innovative approach considers dynamics where the changes themselves are variables in particular this research identifies types of entrepreneurial reactions to market condition changes in terms of dimensions of entrepreneurial orientation furthermore it provides an answer to how firm performance evolved regarding various reaction types using the example of covid 19 external environment small businesses firm performance cluster analysis entrepreneurial behavior redefining rural entrepreneurship the impact of business ecosystems on the success of rural businesses in extremadura spain abstract purpose regarding the growth of public policies fostering rural entrepreneurship the primary objectives of this work involve examining the concept of rural entrepreneurship identifying key aspects that differentiate it from non rural entrepreneurship and assessing the role of the local entrepreneurial ecosystem in supporting the initiation and growth of rural ventures to achieve these goals the study adopts a novel approach by integrating an analysis of rural entrepreneurship features with an exploration of the entrepreneurial ecosystem s impact methodology after a review of the previous academic literature the characteristics of rural entrepreneurship have been delimited distinguishing it from non rural the research results have been obtained using a questionnaire after a descriptive analysis of the sample and an analysis of the difference in means by contrasting hypotheses using ibm spss statistics 26 findings this article explores the factors that contribute to rural entrepreneurship challenging the notion that geographic location is the sole defining characteristic through the conducted investigation it has been determined that a company s classification as rural is not solely based on its geographical location in rural areas or involvement in primary sector activities other aspects such as a strong connection with the local community or the ability to create value are also essential in defining a rural enterprise additionally it examines how business ecosystems can foster the growth and success of rural entrepreneurship implications this study provides an analysis of how rural entrepreneurship can drive endogenous development in rural areas it also offers insights for government entities and policymakers to implement effective support measures and strategies in business ecosystems within rural environments this study highlights that the resources found in rural entrepreneurial ecosystems may not be sufficient to support rural entrepreneurship it s important to acknowledge that rural entrepreneurship requires specific resources that may not currently be available in business ecosystems to increase the number of viable rural businesses new resources tailored to rural entrepreneurship must be created leveraging the area s endogenous resources and growth models originality and value this study examines the distinctive attributes of rural entrepreneurship with a deliberate departure from exclusive emphasis on geographical location or primary economic sector drawing

upon empirical research conducted among a cohort of rural enterprises the analysis reveals that neither physical location nor primary sector affiliation substantially contribute to the establishment of these rural businesses instead a profound connection to and a heightened sense of belonging within the rural milieu emerge as pivotal determinants furthermore rural entrepreneurship emerges as a promising avenue for the development of the region offering substantial growth prospects the investigation encompasses a scrutiny of the resources within the rural business ecosystem and their capacity to stimulate rural entrepreneurial activity this emerging focal point represents a novel field of concern for governmental bodies and political institutions operating in rural areas keywords impact local community engagement policy implementation for rural areas value creation embeddedness making of intrapreneurial managers investigating unethical behavior risk taking and decision making speed as antecedents abstract purpose the entrepreneurship ethics nexus draws considerable interest from researchers and practitioners with little resolution our purpose with this paper is to contribute to the debate by shedding light on the relationship between managers attitudes toward unethical behavior and their subsequent entrepreneurial intention ei in an emerging economy context given the complex and multifaceted interplay between unethical behavior and ei we extend our investigation by including decision making speed and attitude toward risk to explain the relationship further we take a granular approach to facets of unethical behavior to gain deeper insights into the specificity of influences they pose on subsequent behavioral intentions methodology primary data were collected from 214 kosovan managers employed in companies from different industries hypothesized relationships were tested by conducting hierarchical regression analyses findings our results indicate that managers with higher ei are not necessarily unethical overall we did not find support for the hypothesis that managers with stronger attitudes toward unethical behavior demonstrate higher entrepreneurial intentions focusing on dimensions of unethical behavior we find that managers who favor bribery are more entrepreneurially inclined furthermore we find that managers who are quick decision makers and risk takers express higher ei implications theoretically we add to the existing body of research on ethics and entrepreneurship by empirically examining the relationship between attitude toward unethical behavior and ei and the viability of the theory of planned behavior as a framework for integrating unethical behavior in entrepreneurship research our study affirms the extension of the theoretical and empirical underpinnings concerning ethics and entrepreneurship contemplating that they are pervasive across contexts we provide important practical implications for managers especially in the corporate entrepreneurship and training context managers are encouraged to foster an entrepreneurial friendly environment that abides by ethical standards our study also informs policymakers of the importance of formal education on entrepreneurship as a mechanism to enforce ethical awareness in future entrepreneurs and intrapreneurs originality and value this study is among the first attempts to test the relationship between unethical behavior and ei in a managerial sample and non western context keywords entrepreneurial intention unethical behavior bribery risk italian it firms with the mediating role of open innovation oi and the moderating role of environmental dynamism ed methodology employing an explanatory research design and convenience sampling technique via an online survey to gather data from a sample of 411 italian it firms the study tested the formulated hypotheses using the structural equation modeling technique in amos statistical software findings the results revealed that ea directly and indirectly influences op of it firms moreover the mediation analysis unveils that oi plays a complementary partial mediation role in the ea op nexus finally ed moderates this focal relationship such that in the presence of high environmental dynamism the relationship between ea and op gets stronger compared to low environmental dynamism implications the findings imply that it firms should emphasize adopting agile procedures and structures that allow them to react to new problems and opportunities swiftly by building a culture of innovation through the adoption of oi strategies inbound outbound and coupled to tap into the broader range of expertise and resources in the business environment to improve the link between oi and op managers should prioritize building relationships with external partners such as customers suppliers and academic institutions it firms should also prioritize building a diverse and inclusive workforce that can bring diverse perspectives and experiences to the innovation process to enhance their innovation capabilities and create products and services that better meet the needs of customers originality and value the study s value lies in extending the ongoing scholarly discussion on the nexus between ea and op by exploring oi as an intermediary mechanism that connects ea op and applied to classification abstract purpose start ups are widely acknowledged as crucial catalysts for innovation and drivers of economic progress however their vulnerability to failure continues to pose a persistent and significant obstacle in light of this the study intends to ascertain the various elements responsible for the elevated incidence of start up failures and examine their contextual associations it further aims to establish the hierarchical structure and identify the crucial factors of start up failure methodology the paper uses the interpretive structural modeling ism approach to determine the structural hierarchy and interconnections among the causes of start up failures identified through the comprehensive analysis of existing literature and experts opinions micmac cross impact matrix multiplication applied to classification analysis is also being utilized to categorize these identified failure causes into autonomous independent dependent and linking factors by their driving and dependency powers findings a structural framework depicting the interrelationships among the factors has been derived showing the failure factor poor market positioning factor at the highest level and the lack of entrepreneurial efficiency at the lowest level of the model the results also revealed that lack of entrepreneurial efficiency poor management and external environmental issues are the most significant independent factors upon which all other failure factors rely it also categorizes poor market positioning as the dependent factor signifying its passive role in the failure of start ups implications as previous literature has discussed the various factors responsible for the failure of start ups in isolation the current study fills out the gap in the literature by establishing linkages among those factors the study s insights emphasize the value of effective management teams and entrepreneurial skills in averting start up failures it highlights the importance of skill development and mentorship to enhance the capabilities of entrepreneurs and their teams furthermore the research indicates that policymakers and support groups can create focus
