this guide has been developed for extension officers in both the public and the private including those interested in agricultural development in zambia the goal of this manual is to serve as a tool that allows readers to access up to date information about various agricultural practices and their advantages and disadvantages there are many organisations in zambia that have programs that aim towards sustainable development in the agricultural sector amongst these programs there are many different approaches to the goal of improving livelihoods although these various programs have good reasons for promoting their specific methods this manual aims to take an independent stance to portray what all of them offer and why this manual also includes significant information about new approaches and traditional farmer practices or conventional farming methods the central theme in this manual is that there can never be only one way to achieve a goal under such diverse conditions as are found in agriculture although a certain amount of benefit can be gained by rigid guidelines to agricultural practice for example a specific crop spacing tillage method or fertilizer recommendation the diverse factors that affect peoples decisions relate to economic social and environmental conditions make such guidelines impractical in many cases

globally there are 3 400 to 4 000 described species of marine microalgae but only 1 to 2 percent are considered to be harmful harmful algal blooms have significant impacts on food safety and security through contamination or mass mortalities of aquatic organisms the impacts and mass mortalities of marine species caused by harmful algae are not new and have been recorded for decades however there is growing concern that these events will increase due to accelerating global warming climate change and anthropogenic activities indeed if not properly controlled aquatic products contaminated with harmful algal toxins are responsible for potentially deadly foodborne diseases and when rapidly growing harmful algal consequences include reduced dissolved oxygen in the ocean dead zones and mass mortalities of aquatic organisms improving harmful algal forecasting is an opportunity to develop early warning systems for harmful algal events such as food contamination mass mortalities or foodborne diseases surveillance systems have been developed to monitor harmful algal in many countries however the lead time or the type of data i.e. identification at the species level determination of toxicity may not be sufficient to take effective action for food safety management measures or other reasons such as transfer of aquaculture products to other areas having early warning systems could help mitigate the impact of harmful algal and reduce the occurrence of harmful algal events the joint fao ioc iaea technical guidance for the implementation of early warning systems for harmful algal will guide competent authorities and relevant institutions involved in consumer protection or environmental monitoring to implement early warning systems for harmful algal present in their areas marine and brackish waters specifically those affecting food safety or food security benthic harmful algal fish killing harmful algal pelagic toxic harmful algal and cyanobacteria harmful algal the guidance provides a roadmap for stakeholders on how to improve or implement an early warning system for harmful algal and toxins where appropriate it is important to note that not all countries and institutions can implement the same level of early warning system for harmful algal and this guidance is intended mainly for those who seek to broaden existing early warning systems or who are just beginning to consider putting a system in place

in 2002 RAND project AIR FORCE studied the data systems used by the AIR Education and Training Command AETC to manage training costs and capacities the Schoolhouse model developed to inform policy decisions regarding technical training pipeline issues grew out of this study the model examines resources used and training limitations encountered during the execution of a training program at the same time the AETC studies and analysis Squadron SAS built a similar set of planning and execution assessment tools RAND and AETC SAS agreed to combine the Schoolhouse portion of their efforts into one model the purpose of this report is to provide front end users of the Schoolhouse model with a reference for collecting and implementing data it also briefly describes the simulation model and its uses the model is potentially useful for evaluating changes in production and resources highlighting resource bottlenecks providing insight into classroom details such as empty seats and the rate of individuals who prove ineffective in training and changes in production resulting from changes in resources course syllabi and washback and attrition rates
