provides facts and background information on a great variety of topics including income
tax world travel the american economy the media health and nutrition and more

the objective of this project was to devise a conceptually simple tool that operationalized
the complex relationship between land use and travel behavior the telumi is a set of
maps that depicts how the region s urban form affects overall transportation system
efficiency nine map layers represent the effects of individual land use variables on
transportation efficiency they include density residential and employment mix of uses
shopping and school traffic the presence of neighborhood centers nc network connectivity
block size parking supply amount of parking at grade pedestrian environment slopes and
affordable housing the tenth layer is a composite index which takes into account the
relative effects of each of the nine variables on transportation efficiency based on a
statistical analysis that modeled the relationship between the land use variables and king
county bus ridership each land use variable is mapped by using three categories which
define zones of high latent and low transportation efficiency te high te values correspond
to many convenient transportation options including transit non motorized and other non
sov travel options low te corresponds to few transportation options beyond sov travel
latent te indicates that travel options remain limited but that land use conditions in these
zones are favorable enough to permit easy and effective increases in future travel options
either via transportation system investments demand management or other programmatic
actions or land use changes the visual dimension of the telumi s maps make the tool an
attractive means of communication with lay audiences while its quantitative capabilities
can speak to transportation and urban planning professionals while the telumi now shows
how to rate areas of the puget sound for their existing transportation efficiency it can
and should also be used to set goals for future transportation efficiency and to monitor

progress over time changes in the values of land use variables can be assessed in terms of their impact on the region's overall transportation efficiency

this twenty fifth volume in a distinguished series addresses a range of topics including the difficult matter of questioning scientific hypotheses in court the use of monte carlo simulation to evaluate time dependent development and to study system reliability in nuclear reactors of considerable complexity the genetic optimization algorithm wavelet analysis ergonomic design of safer and more efficient plant control rooms

the sixth volume of an important series on education and business co published with oxford university center for the study of values in education and business this book highlights the tensions involved in the interplay between competitive universities and businesses the papers are the results of academic study across the globe and examine the intersection of the business world with the educational process business schools organizational transformation corporal punishment and various world models of education are explored
