the belief formula the secret to unlocking the power of prayer is an amazing look at the role of the human mind thought patterns and the very real power of belief in the creation process a continuous process which produces every single moment of your life according to your thoughts most of us grew up being told what to think believe and do but not how to think and believe the belief formula will teach you how you can live the life of your dreams and how to find what you seek in life the belief formula makes practical sense out of ancient principles and demonstrates how the latest medical and scientific research offers clinical evidence that our thoughts create our physiology and every part of our existence most people are not aware that there is more than one way to think and that they unconsciously spend most of the day operating in the least effective part of their brain

uncertainty proceedings 1994

jason is an open source interpreter for an extended version of agentspeak a logic based agent oriented programming language written in java. it enables users to build complex multi agent systems that are capable of operating in environments previously considered too unpredictable for computers to handle. jason is easily customisable and is suitable for the implementation of reactive planning systems according to the belief desire intention bdi architecture programming multi agent systems in agentspeak using jason provides a brief introduction to multi agent systems and the bdi agent architecture on which agentspeak is based. the authors explain jason's agentspeak variant and provide a comprehensive practical guide to using jason to program multi agent systems. some of the examples include diagrams generated using an agent oriented software engineering methodology particularly suited for implementation using bdi based programming languages. the authors also give guidance on good programming style with agentspeak programming multi agent systems in agentspeak using jason describes and explains in detail the agentspeak extension interpreted by jason and shows how to create multi agent systems using the jason platform. reinforces learning with examples problems and illustrations includes two case studies which demonstrate the use of jason in practice. features an accompanying website that provides further learning resources including sample code exercises and slides. this essential guide to agentspeak and jason will be invaluable to senior undergraduate and postgraduate students studying multi agent systems. the book will also be of interest to software engineers designers developers and programmers interested in multi agent systems.
