the most interesting entry point to the demarcation problem in science since popper s seminal formulation steve fuller professor of sociology social policy durham university what is science what isn t science and who draws the line between them these are rhetorical concerns as charles a taylor demonstrates in this ambitious book about the

theoretical and cultural underpinnings of scientific practice by showing how boundaries between science and nonscience are rhetorically constructed and socially enforced defining science reveals the political and philosophical significance of such distinctions taylor examines the traditional demarcation problem the problem of defining the boundaries of science as an ongoing rhetorical negotiation involving a full range of historical interests and social actors from researchers and lab technicians to governmental and industrial patrons program administrators political representatives journalists and educators his case studies of the recent debates over creationism and cold fusion clearly demonstrate how the rhetorical dynamics of science operate within different fields in both cases presented here with concision and insight prevailing demarcations or defining portrayals of science emerge as far more nuanced than traditional accounts allow taylor analyzes traditional approaches to demarcation in science in order to incorporate their insights into his larger rhetorical view his reformulation of philosophical historical and sociological accounts of science clearly illustrates the intellectual value of an interdisciplinary rhetoric of demarcation furthermore defining science suggests how we as a community can positively influence future constructions of science and society this book confronts what is arguably the late twentieth century s definitive problem in a provocative and interesting way it will be of interest to anyone engaged with the question of knowledge in public life charles arthur willard professor and chair of the department of communication university of louisville

for the past twenty five years ultra fundamentalist christians have put increasing pressure on american public education to conform exclusively with their own philosophy and vision of education and culture eugene provenzo considers and addresses the impact that the fundamentalist movement has had on such issues as censorship textbook content creationism versus evolution the family and education school prayer and the state regulation of

christian schools in exploring both sides of the debate however the author concludes that many fundamentalists concerns are justified due to a basic inconsistency between the rights guaranteed under the first amendment and the position that many public schools have legally assumed

science has never been more crucial to deciding the political issues facing the country yet science and scientists have less influence with the federal government than at any time since the eisenhower administration in the white house and congress today findings are reported in a politicized manner spun or distorted to fit the speaker s agenda or when they re too inconvenient ignored entirely on a broad array of issues stem cell research climate change missile defense abstinence education product safety environmental regulation and many others the bush administration s positions fly in the face of overwhelming scientific consensus federal science agencies once fiercely independent under both republican and democratic presidents are increasingly staffed by political appointees and fringe theorists who know industry lobbyists and evangelical activists far better than they know the science this is not unique to the bush administration but it is largely a republican phenomenon born of a conservative dislike of environmental health and safety regulation and at the extremes of evolution and legalized abortion in the republican war on science chris mooney ties together the disparate strands of the attack on science into a compelling and frightening account of our government s increasing unwillingness to distinguish between legitimate research and ideologically driven pseudoscience

who should decide what children are taught in school this question lies at the heart of the evolution creation wars that have become a regular feature of the us political landscape ever since the 1925 scopes monkey trial many have argued that the people should decide by majority rule and through political institutions others variously point to the federal courts educational experts or scientists as the ideal arbiter berkman and plutzer illuminate who really controls the nation s classrooms based on their innovative survey of 926 high school biology teachers they show that the real power lies with individual educators who make critical decisions in their own classrooms broad teacher discretion sometimes leads to excellent instruction in evolution but the authors also find evidence of strong creationist tendencies in america s public high schools more generally they find evidence of a systematic undermining of science and the scientific method in many classrooms

american religion steven goldberg claims has fallen into a trap just at the moment when it has amassed the political strength and won the legal right to participate effectively in public debate it has lost its distinctive voice instead of speaking of human values goals and limits it speaks in the language of science in the united states science has extraordinary influence and respect american religious leaders seeking prestige for their point of view regularly couch their responses to technological developments or defend their faith in scientific terms they claim for instance that medical studies demonstrate the power of prayer that science validates the bible including its account of creation and that patenting the genetic code is dangerous because genes are the essence of who we are but when ministers priests and rabbis expound on double blind studies and the genetic causes of behavior they do not elevate religion goldberg maintains they trivialize it seduced by science examines how by allowing scientific discourse to set the terms of the debate american religious leaders facilitate religion s move away from its more appropriate and important concerns of values morality and humility science can tell us a lot about what is but precious little about what ought to be and our religious leaders often miss the chance to add an important voice from a faith based perspective to the public debate that follows scientific advances discussing the most recent and pressing collisions between science and religion such as the medicinal benefits of prayer the human genome project and cloning goldberg raises the timely question of what the appropriate role of religion might be in public life today tackling the legal aspects of religious debate goldberg suggests ways that religious leaders might confront new scientific developments in a more meaningful fashion
