historian philosopher critic playwright journalist and actor egon friedell was a key figure in the extraordinary flowering of viennese culture between the two world wars his masterpiece a cultural history of the modern age demonstrates the intellectual universality that friedell saw as guarantor of the continuity and regeneration of european civilization following a brilliant opening essay on cultural history and why it should be studied the first volume begins with an analysis of the transformation of the medieval mind as it evolved from the black death to the thirty years war the emphasis is on the spiritual and cultural vortex of civilization but friedell never forgets the european roots in pestilence death and superstition that animate a contrary drive toward reason refinement intellectual curiosity and scientific knowledge while these values reached their apogee during the renaissance friedell shows that each cultural victory is precarious and europe was always in danger of slipping back into barbarism friedell s historical vision embraces the whole of western culture and its development it is a consistent probing for the divine in the world s course and is therefore theology it is research into the basic forces of the human soul and is therefore psychology it is the most illuminating presentation of the forms of state and society and therefore is politics the most varied collection of all art creations and is therefore aesthetics thomas mann regarded friedell as one of the great stylists in the german language like the works of the great novelist a cultural history of the modern age offers a dramatic history of the last six centuries showing the driving forces of each age

the new introduction provides a fascinating biographical sketch of friedell and his cultural milieu and analyzes his place in intellectual history

in this deeply probing intellectually challenging work dr jaanvalsiner lays the groundwork for a dynamic new cultural historical approach to developmental psychology he begins by deconstructing traditional developmental theory exposing the conceptual confusion and epistemological blind spots that he believes continue to undermine the scientific validity of its methodologies he describes the ways in which embedded cultural biases shape interventional goals and influence both the direction research takes and the ways in which research data are interpreted and he suggests ways in which researchers and clinicians can become more aware of and transcend those biases dr valsiner then develops a hierarchical systemic model that portrays development as an open ended dialectical process central to valsiner's approach is the premise that since each child is unique as are his or her life conditions deviations in function or the rate of development from a prescribed norm are just as likely to be constructive adaptations to changing environmental pressures as symptoms of psychological disorder drawing upon sources as varied as linguistic philosophy structural anthropology thermodynamics and systems theory as well as the work of many of the leading figures in twentieth century developmental theory valsiner argues convincingly for an approach to developmental psychology mature enough to recognize the difference between healthy variability and dysfunction in later chapters the focus shifts from development in the abstract to the everyday challenges encountered by the developing child case histories illustrate the subtle interplay of cultural physiological and psychological factors in shaping childhood behavior called an intellectual tour de force by the bulletin of the menninger clinic culture and the development of children's action is important reading for developmental psychologists child psychologists and all child clinicians of course no science progresses in a linear fashion it moves interdependently with the society in which it is embedded making use of the narrative forms in describing itself to its insiders and outsiders the rhetoric of scientists about their science is therefore necessarily inconsistent sciences are both social institutions within a society and social organizations that attempt to build universal knowledge it is a complicated task for psychology to be both knowledge constructing and self reflexive at the same time nevertheless it is the latter kind of reflexivity that guides the actual construction of knowledge jaanvalsiner this book is a fascinating and important work that challenges much of contemporary developmental psychology the second edition has changed in a number of respects and much new material has been added but at root valsiner grapples with the question how shall we understand development he continues to struggle also with what he describes rather vividly as the epistemological windmills of psychology his challenge is summed up succinctly in two lines from a poem by t s eliot where is the wisdom we have lost in knowledge where is the knowledge we have lost in

this collection discusses and illustrates how educational research is affected by the economic institutional and physical contingencies of its time and in our time even increasingly is driven by them it is argued that the antidote to this is however not to aspire to thought itself but instead to do justice to its own rootedness in the material including textuality from an historical point of view such an innovative approach can itself revamp the material scholarly culture and the way it is represented the chapters address a variety of topics such as the cultural heritage of the school desk the significance of images for research into long term educational processes the way iconic signs function and how modes of enquiry relate to the materiality of education attention is also given to standards for reporting on educational research studies and how these limit the scope and communication and moreover shape researchers to the forms of citation practices as
