the monograph presents an outline of the methods used to predict the performance of lenses from an analysis of their designs the technique is based on the use of spot diagrams which are analogs of star image tests and makes extensive use of high speed digital computers a collection of twenty one spot diagram analyses is included author

early medieval astronomy esp in the era of charlemagne his successors consisted of texts that went far beyond the boundaries of

computus which modern scholars have long believed to be the only significant context for astronomical studies of that time the texts contained innovative diagrams where no other sign of divergence from the text could be seen such diagrams were found to provide an indication of understandings of the texts which were different from those of modern scholars contents astronomy its teaching in carolingian europe functions locations of planetary diagrams sources topics of planetary diagrams plinian diagrams macrobian diagrams calcidian diagrams capellan diagrams illus this is a print on demand publication

at last geochemists are offered one comprehensive reference book which gives the eh ph diagrams for 75 elements found in the earth s surface environment including transuranic and other radioactive species for each of these newly calculated diagrams short explanatory texts are added for the first time the primary elements are considered in water with metal sulfur carbon and other

species as appropriate furthermore based on these figures and up to date thermodynamic data presented in this reference researchers can predict the behavior of elements in the surface environment geoscientists chemists and environmental agencies will also benefit from several brief texts on the importance of various elements to problems of radioactive waste disposal

the effectiveness of a magnetic field in stabilizing the laminar flow of an incompressible electrically conducting fluid is studied the neutral stability curves pertaining to a two dimensional sinusoidal disturbance are presented for flow over a semi infinite flat plate in the presence of either a coplanar or transverse magnetic field and for channel flow in the presence of a coplanar magnetic field as is to be expected the magnetic field stabilizes the flow unless the velocity profile is distorted by the magnetic field to an inherently unstable shape this occurs when a transverse magnetic field is fixed relative to a semi infinite flat plate

the book summarizes the author's experimental studies of phase relations in the chemical systems relevant to earth carried out in a time period of over 20 years using piston cylinder and multi anvil presses a summary of the research at high pressures and temperatures carried out by many other experimental petrologists is also included the data was used to develop an internally consistent thermodynamic model which was then used to calculate phase diagrams this produced the largest collection of the calculated phase diagrams published so far encompassing for the first time the temperature and pressure ranges corresponding to the whole upper mantle

this book introduces a novel approach to discrete optimization providing both theoretical insights and algorithmic developments that lead to improvements over state of the art technology the authors present chapters on the use of decision diagrams for combinatorial optimization and constraint programming with attention to general purpose solution methods as well as problem specific techniques the book will be useful for researchers and practitioners in discrete optimization and constraint programming decision diagrams for optimization is one of the most exciting developments emerging from constraint programming in recent years
