industrial capitalism is broken the signs which transcend national ideologies are everywhere climate change ecological overshoot financial exhaustion fraying social safety nets corporate fraud government deceit civic unrest terrorism and war but there is hope this book tells how transformation is taking root in the corporate world the last place many of us would look for solutions the book tells the stories of seven exceptional companies their shared secret is a new mental model of the firm that is the virtual opposite of industrial capitalism each company if not already a household name is a significant player within their industry and crucially has outperformed their competitors

lessons can be learned it works like this instead of modeling themselves on the assumed efficiency of machines a thought process that emerged during the industrial age these firms model themselves on living systems firms with open ethical inclusive traditions where employees have a voice and a stake in what happens have a distinct advantage over traditionally managed companies where most decisions are made at the top understanding that everything of value ultimately arises from life they place a higher value on living assets people and nature than they do on non living capital assets the energy they invest in stewarding those assets a practice described in the book as living asset stewardship las is transformative

today computers fulfil a dazzling array of roles a flexibility resulting from the great range of programs that can be run on them a science of operations examines the history of what we now call programming defined not simply as computer programming but more broadly as the definition of the steps involved in computations and other information processing activities this unique perspective highlights how the history of programming is distinct from the history of the computer despite the close relationship between the two in the 20th century the book also discusses how the development of programming languages is related to disparate fields which attempted to give a mechanical account of language on the one hand and a linguistic account of machines on the other topics and features covers the early development of automatic computing including babbage s mechanical calculating engines and the applications of punched card technology examines the theoretical work of mathematical logicians such as kleene church post and turing and the machines built by zuse and aiken in the 1930s and 1940s discusses the role that logic played in the development of the stored program computer describes the standard model of machine code programming popularised by maurice wilkes presents the complete table for the universal turing machine in the appendices investigates the rise of the initiatives aimed at developing higher level programming notations and how these came to be thought of as languages that could be studied independently of a machine examines the importance of the algol 60 language and the framework it provided for studying the design of programming languages and the process of software development and explores the early development of object oriented languages with a focus on the smalltalk project this fascinating text offers a new viewpoint for historians of science and technology as well as for the general reader the historical narrative builds the story in a clear and logical fashion roughly following chronological order
