there must exist a point at which the molecular and electro chemical processes that comprise brain function are transformed into rich orderly conscious experience which seamlessly blends the present moment what led up to it and what will follow it this is the stuff of our everyday lives and it raises questions about its organization and how that organization facilitates engagement with the world at large in short what is the structure of conscious experience and what is gained by it being structured that way this book argues that the structure is what is familiarly known as narrative form and that the gain is the ability to communicate about one s experience with oneself and others as well as to make informed predictions about what will happen in the fundamentally unknowable and potentially dangerous future in the latter case because the essence of narrative form is time and causality structuring events from memory the past and from perception the present in narrative form causally implies future events expectations the potential threat the bad or the absence of good of these expected future events can be assessed and if required action can be taken to prevent their occurrence or to diminish their impact the implications about thinking and action and about who we are as individuals are also discussed here
