this book features the outcomes of the 9th international conference on soft computing for problem solving socpros 2019 which brought together researchers engineers and practitioners to discuss thought provoking developments and challenges in order to identify potential future directions the book presents the latest advances and innovations in the interdisciplinary areas of soft computing including original research papers in areas such as algorithms artificial immune systems artificial neural networks genetic algorithms genetic programming and particle swarm optimization and applications control systems data mining and clustering finance weather forecasting game theory business and forecasting applications it is a valuable resource for both young and experienced researchers dealing with complex and intricate real world problems that cannot easily be solved using traditional methods

this two volume book presents the outcomes of the 8th international conference on soft computing for problem solving socpros 2018 this conference was a joint technical

collaboration between the soft computing research society liverpool hope university uk and vellore institute of technology india and brought together researchers engineers and practitioners to discuss thought provoking developments and challenges in order to select potential future directions the book highlights the latest advances and innovations in the interdisciplinary areas of soft computing including original research papers on algorithms artificial immune systems artificial neural networks genetic algorithms genetic programming and particle swarm optimization and applications control systems data mining and clustering finance weather forecasting game theory business and forecasting applications it offers a valuable resource for both young and experienced researchers dealing with complex and intricate real world problems that are difficult to solve using traditional methods

this book deals with a spectrum of problems related to the mathematical modeling of multiphase filtration emphasis is placed on an inseparable triad model algorithm computer code an analysis of new and traditional filtration problems from the point of view of both their numerical implementation and the reproduction of one or another technological characteristics of the processes under consideration is given the basic principles which underlie the construction of efficient numerical methods taking into account the filtration problems are discussed non evolutionary nature degeneration strongly varying coefficients the temporal duration of the processes involved etc also attention is paid to the splitting method in terms of the physical processes involved the method of fictitious domains and the method of front separation in grid solution a modular analysis is performed with computational algorithms making it possible to set up simultaneously the structure of the algorithms themselves and the structure of programs to implement these algorithms on a computer in conclusion the author discusses issues concerning the possibility of constructing a model of an oil deposit on a computer

this volume in the inverse and ill posed problems series studies dynamical inverse problems i e such problems whose data are the values of wave fields the monograph deals with the problem of determination of one or more coefficients of a hyperbolic equation or a system of hyperbolic equations the desired coefficients are functions of point most attention is given to the case where the required functions depend only on one coordinate the first chapter of the book deals mainly with methods of solution of one dimensional inverse problems the second chapter focuses on scalar inverse problems of wave propagation in a layered medium in the final chapter inverse problems for elasticity equations in stratified media and acoustic equations for moving media are given this monograph will be of value and interest to researchers in the fields of mathematical physics geophysics acoustics elasticity theory and electrodynamics

this volume covers topics including two dimensional problems of a magnetic exploration method involving artificial field magnetization and electric exploration by a direct current effective algorithms of solution of direct and inverse three dimensional problems of magnetic exploration mathematical theory and algorithms of the solution of three dimensional inverse problems of electric exploration with a direct current and explicit equations for inverse problems of electromagnetic field

this book based on the best papers accepted for presentation during the international conference on current problems of applied mathematics and computer systems cpamcs 2024 russia this book includes research focused on contemporary mathematical challenges and their resolutions within scientific computing data analysis and modular computing this book presents original studies on numerical methods in scientific computing optimization problem solving function approximation techniques among other topics furthermore it encompasses

research contributions in data analysis and modular computing highlighting advancements in deep learning neural networks mathematical statistics machine learning techniques residue number systems and artificial intelligence additionally this book addresses critical issues in mathematical education this book intends for professionals engaged in scientific computing parallel computing computer technology machine learning information security and mathematics education

the public outcry for a return to moral education in our schools has raised more dust than it dispelled building upon his provocative ideas in on becoming responsible michael pritchard clears the air with a sensible plan for promoting our children s moral education through the teaching of reasonableness pritchard contends that children have a definite but frequently untapped capacity for reasonableness and that schools in a democratic society must make the nurturing of that capacity one of their primary aims as fundamental to learning as the development of reading writing and math skills reasonableness itself he shows can be best cultivated through the practice of philosophical inquiry within a classroom community in such an environment children learn to work together to listen to one another to build on one another s ideas to probe assumptions and different perspectives and ultimately to think for themselves advocating approaches to moral education that avoid mindless indoctrination and timid relativism pritchard neither preaches nor hides behind abstractions he makes liberal use of actual classroom dialogues to illustrate children s remarkable capacity to engage in reasonable conversation about moral concepts involving fairness cheating loyalty truth-telling lying making and keeping promises obedience character and responsibility he also links such discussions to fundamental concerns over law and moral authority the roles of teachers and parents and the relationship between church and state pritchard draws broadly and deeply from the fields of philosophy and psychology as well as from his own extensive personal experience working with children and teachers the result is a rich and insightful work that provides real hope for the future of our children and their moral education
