computational logic is a fast growing field with applications in artificial intelligence constraint solving and the design and verification of software and hardware systems written with graduate and advanced undergraduate students in mind this textbook introduces computational logic from the foundations of first order logic to state of the art decision procedures for arithmetic data structures and combination theories this textbook also presents a logical approach to engineering correct software the increasing ubiquity of computers makes implementing correct systems more important than ever verification exercises develop the reader s facility in specifying and verifying software using logic the treatment of verification concludes with an introduction to the static analysis of software an important component of modern verification systems for readers interested in learning more about computational logic decision procedures verification and other areas of formal methods the final chapter outlines courses of further study

the evidence that omega 3 fatty acids are essential for human development and most helpful to achieve good health throughout life is clearly documented by dr joyce nettleton in her new book omega 3 fatty acids and health omega 3 fatty acids are produced by the plants of the land and sea the tissues of the body require the omega 3 fatty acids for their proper functioning just as they also need the omega 6 essential fatty acids it is probable in man s evolutionary development that there has always been the proper balance between these two groups of essential fatty acids but in the modern era with the provision of inexpensive vegetable oils it is possible that the pendulum for increased dietary omega 6 fatty acids in the form of linoleic acid has swung too far and the intake of omega 3 fatty acids has actualiy declined in particular the 22 carbon omega 3 fatty acid docosahexaenoic acid which has six double bonds is important in the membranes of brain cells heart muscle cells the

rods and cones of the retina and spermatozoa docosahexaenoic acid is found only in foods such as fish and other sea life having been synthesized by the phytoplankton of the waters an outright deficiency of omega 3 fatty acids has led to a number of disturbances in animals and human infants such as impaired vision abnormalities of the electroretinogram of the eye and various behavioral aberrations

a complete guide to the role of high density lipoproteins hdl in new and emerging therapies with high density lipoproteins hdl playing an increasing role in cardiovascular disease prevention there is a growing need for an in depth look at hdl and its clinical value this book summarizes the current state of knowledge in the field providing for the first time a comprehensive systematic stylistically coherent and up to date review of the composition structure heterogeneity metabolism epidemiology genetics and function of hdl divided into three main parts high density lipoproteins first examines normal hdl particles then describes defective hdl and finally addresses the therapeutic normalization of subnormal levels and defective biological activities of this lipoprotein class the book highlights the functional properties of hdl which are relevant to the pathophysiology of atherosclerosis and thrombosis and discusses the compositional and metabolic heterogeneity of hdl particles readers will come away with a clear understanding of the role of hdl in biological processes the potential value of functional hdl as a therapeutic target and how current and emerging therapies are poised to influence the treatment of heart disease in the future

this book provides an authoritative and comprehensive source of information on the biochemical and metabolic aspects of digestion and absorption of different dietary fats and other lipids with minimal discussion of the physical chemistry of the process which has been covered in great detail in previous reviews it is intended for both researchers and practitioners in the biomedical field who require detailed knowledge of the biomedical and metabolic transformations involved in the intestinal digestion and resynthesis of dietary fats and other lipids

electrical and thermal physics is part of a series of lively high quality texts for senior physics students

this book is specifically designed for medical students graduates appearing for various national and international postgraduate medical entrance exams the main objective is to present the content in a concise and reader friendly format this book has a perfect mix of conceptual and factual elements along with special segments to help in easy understanding and retention

the aim of this book is to bring together in one volume the current research and thought on the concept of membrane fluidity as a biological phenomenon the invited articles are intended to review recent developments in the areas of membrane research covered and to summarize the current concepts and theories in those areas the authors have been given ample opportunity to present their thoughts and speculation on membrane fluidity and related phenomena in a more expanded form than is usually possible in reviews of this type it is hoped that this approach will have a stimulating effect on research and theoretical development in the biomembrane field the chapters in this book are arranged in three sections the first of which covers physical studies of membrane fluidity and related phenomena on the molecular level included are chapters on intermolecular hydrogen bonding between membrane lipids thermal analysis of membranes application of fluorescence and nmr spectrometry to the study of membrane fluidity and the effect of drugs and other compounds on membrane stability and fluidity the second section deals with the regulation of membrane fluidity in microorganisms plants and higher organisms by factors such as temperature fatty acid chain length lipid desaturation and polar head group structure

this book provides a self contained and systematic introduction to classical electron theory and its quantization non relativistic quantum electrodynamics the first half of the book covers the classical theory it discusses the well defined abraham model of extended charges in interaction with the electromagnetic field and gives a study of the effective dynamics of charges under the condition that on the scale given by the size of the charge distribution they are far apart and the applied potentials vary slowly the second half covers the quantum theory leading to a coherent presentation of non relativistic quantum electrodynamics topics discussed include non perturbative properties of the basic hamiltonian the structure of resonances the relaxation to the ground state through emission of photons the non perturbative derivation of the g factor of the electron and the stability of matter

this biographical study illuminates one of the most important yet misunderstood figures in the history of science barbara mcclintock 1902 1992 a geneticist who integrated classical genetics with microscopic observations of the behavior of

chromosomes was regarded as a genius and as an unorthodox nearly incomprehensible thinker in 1946 she discovered mobile genetic elements which she called controlling elements thirty seven years later she won a nobel prize for this work becoming the third woman to receive an unshared nobel in science since then mcclintock has become an emblem of feminine scientific thinking and the tragedy of narrow mindedness and bias in science using mcclintock s research notes newly available correspondence and dozens of interviews with mcclintock and others comfort argues that mcclintock s work was neither ignored in the 1950s nor wholly accepted two decades later nor was mcclintock marginalized by scientists throughout the decades of her alleged rejection she remained a distinguished figure in her field comfort replaces the mcclintock myth with a new story rich with implications for our understanding of women in science and scientific creativity
