modern current and future communications processing aspects motivate basic information theoretic research for a wide variety of systems for which we do not have the ultimate theoretical solutions for example a variety of problems in network information theory as the broadcast interference and relay channels which mostly remain unsolved in terms of determining capacity regions and the like technologies such as 5 6g cellular communications internet of things iot and mobile edge networks among others not only require reliable rates of information measured by the relevant capacity and capacity regions but are also subject to issues such as latency vs reliability availability of system state information priority of information secrecy demands energy consumption per mobile equipment sharing of communications resources time frequency space etc this book composed of a collection of papers that have appeared in the special issue of the entropy journal dedicated to information theory for data communications and processing reflects in its eleven chapters novel contributions based on the firm basic grounds of information theory the book chapters address timely theoretical and practical aspects that constitute both interesting and relevant theoretical contributions as well as direct implications for modern current and future communications systems

the fth campaign of the cross language evaluation forum clef for eu pean languages was held from january to september 2004

participation in the clef campaigns has increased each year and clef 2004 was no exception 55 groups submitted results for one or more of the different tracks compared with 42 groups in the previous year clef 2004 also marked a breaking point with respect to previous campaigns the focus was no longer mainly concentrated on multilingual document retrieval as in previous years but was diversified to include different kinds of text retrieval across languages e.g. exact answers in the question answering track and retrieval on different kinds of media i.e. not just plain text but collections containing image and speech as well in addition increasing attention was given to issues that regard system usability and user satisfaction with tasks to measure the effectiveness of interactive systems or system components being included in both the cross language question answering and image retrieval tasks with the collaboration of the coordinators of the interactive track the campaign culminated in a two and a half day workshop held in bath uk 15-17 september immediately following the 8th european conference on digital libraries the workshop was attended by nearly 100 researchers and system developers

this volume constitutes the refereed proceedings of the 17th international symposium on graph drawing gd 2009 held in chicago usa during september 2009 the 31 revised full papers and 4 short papers presented were carefully reviewed and selected out of 79 submissions furthermore 10 posters were accepted in a separate submission process

in this introductory textbook the author explains the key topics in cryptography he takes a modern approach where defining what is meant by secure is as important as creating something that achieves that goal and security definitions are central to the discussion throughout the author balances a largely non-rigorous style many proofs are sketched only with appropriate formality and depth for example he uses the terminology of groups and finite fields so that the reader can understand both the latest academic research and real world documents such as application programming interface descriptions and cryptographic standards the text employs colour to distinguish between public and private information and all chapters include summaries and suggestions for further reading this is a suitable textbook for advanced undergraduate and graduate students in computer science mathematics and engineering and for self study by professionals in information security while the appendix summarizes most of the basic algebra and notation required it is assumed that the reader has a basic knowledge of discrete mathematics probability and elementary calculus
