this book sheds new light on the biographical approach in the history of physics by including the biographies of scientific objects institutions and concepts what is a biography can biographies also be written for non human subjects like

scientific instruments institutions or concepts the respective chapters of this book discuss these controversial questions using examples from the history of physics by approaching biography as metaphor it transcends the boundaries between various perspectives on the history of physics and enriches our grasp of the past

the book's argument depends as do most proposals in education upon certain positions in the philosophy of education i believe that education should be primarily concerned with developing understanding with initiation into worthwhile traditions of intellectual achievement and with developing capacities for clear analytic and critical thought these have been the long accepted goals of liberal education in a liberal education students should come to know and appreciate a variety of disciplines know them at an appropriate depth see the interconnectedness of the disciplines or the modes of thought and finally have some critical disposition toward what is being learned to be genuinely open minded about intellectual things these liberal goals are contrasted with goals such as professional training job preparation promotion of self esteem social engineering entertainment or countless other putative purposes of schooling that are enunciated by politicians administrators and educators the book's argument might be consistent with other views of education especially ones about the training of specialists sometimes called a professional view of education but the argument fits best with a liberal view of education the liberal hope has always been that if education is done well then other personal and social goods will follow the development of informed critical and moral capacities is the cornerstone for personal and social achievements
