that ravaged the plains

in the mid 1930s north america's great plains faced one of the worst man made environmental disasters in world history donald worster's classic chronicle of the devastating years between 1929 and 1939 tells the story of the dust bowl in ecological as well as human terms now twenty five years after his book helped to define the new field of environmental history worster shares his more recent thoughts on the subject of the land and how humans interact with it in a new afterword he links the dust bowl to current political economic and ecological issues including the american livestock industry's exploitation of the great plains and the on going problem of desertification which has now become a global phenomenon he reflects on the state of the plains today and the threat of a new dustbowl he outlines some solutions that have been proposed such as the buffalo commons where deer antelope bison and elk would once more roam freely and suggests that we may yet witness a great plains where native flora and fauna flourish while applied ecologists show farmers how to raise food on land modeled after the natural prairies that once existed

before the drought of the early twenty first century the dry benchmark in the american plains was the dust bowl of the 1930s but in this eye opening work kevin z sweeney reveals that the dust bowl was only one cycle in a series of droughts on the u s southern plains reinterpreting our nation's nineteenth century history through paleoclimatological data and firsthand accounts of four dry periods in the 1800s prelude to the dust bowl demonstrates the dramatic and little known role drought played in settlement migration and war on the plains stephen h long's famed military expedition coincided with the drought of the 1820s which prompted long to label the southern plains a great american desert a destination many anglo americans thought ideal for removing southeastern indian tribes to in the 1830s the second dry trend from 1854 to 1865 drove bison herds northeastward fomenting tribal warfare and deprived civil war armies in indian

territory of vital commissary in the late 1880s and mid 1890s two more periods of drought triggered massive outmigration from the southern plains as well as appeals from farmers and congressmen for federal famine relief pleas quickly denied by president grover cleveland sweeney s interpretation of familiar events through the lens of drought lays the groundwork for understanding why the u s government s reaction to the dust bowl of the 1930s was such a radical departure from previous federal responses prelude to the dust bowl provides new insights into pivotal moments in the settlement of the southern plains and stands as a timely reminder that drought as part of a natural climatic cycle will continue to figure in the unfolding history of this region

in may 1936 secretary of agriculture henry a wallace wrote to caroline henderson to praise her contributions to american understanding of some of our farm problems his comments reflected the national attention aroused by henderson s articles which had been published in atlantic monthly since 1931 even today henderson s articles are frequently cited for her vivid descriptions of the dust storms that ravaged the plains caroline henderson was a mount holyoke graduate who moved to oklahoma s panhandle to homestead and teach in 1907 this collection of henderson s letters and articles published from 1908 to 1966 presents an intimate portrait of a woman s life in the great plains her writing mirrors her love of the land and the literature that sustained her as she struggled for survival alvin o turner has collected and edited henderson s published materials together with her private correspondence accompanying biographical sketch chapter introductions and annotations provide details on henderson s life and context for her frequent literary allusions and comments on contemporary issues

an introduction to the causes events and consequences of the extreme drought and dust storms that affected the great plains during the 1930s

this book takes the dust bowl story beyond depression america to describe the dust bowl concept as a transnational phenomenon where during world war two us and australian national mythologies converged dust bowl begins with depression america the new deal and the us dust bowl where massive dust storms darkened the skies of the great plains and triggered a major national and international media event and generated imagery describing a failed yeoman dream dust bowl refugees and the coming of a new american desert dust bowl traces the evolution of this imagery to australia world war two and new deal inspired stories of conservation mindedness soil erosion and enemies sheep farmers and traitors creeping deserts and human extinction super human housewives and natural disaster and finally grand visions of a nation building post war scheme for australia s iconic snowy river that vision became the snowy mountains hydro electric scheme

describes the dust storm of the 1930 s describing the safety measures and changes that occurred after the disaster

a profound reinterpretation of both the dust bowl on the u s southern plains and its relevance for today the 1930s witnessed a harrowing social and ecological disaster defined by the severe nexus of drought erosion and economic depression that ravaged the u s southern plains known as the dust bowl this crisis has become a major referent of the climate change era and has long served as a warning of the dire consequences of unchecked environmental despoliation through innovative research and a fresh theoretical lens hannah holleman reexamines the global socioecological and economic forces of settler colonialism and imperialism precipitating this disaster explaining critical antecedents to the acceleration of ecological degradation in our time holleman draws lessons from this period that point a way forward for environmental politics as we confront the growing global crises of climate change freshwater scarcity extreme energy and soil degradation

this is a powerful original account of one man s efforts to raise wheat on his farm in meade county kansas during the 1930s lawrence svobida tells of farmers fighting in the front line trenches putting in crop after crop year after year only to see each crop in turn destroyed by the elements although not a writer by trade svobida undertook to record what he saw and experienced to help the reader to understand what is taking place in the great plains region and how serious it is he wrote of the need for better farming methods the only way he felt the destruction could be halted or confined well before the principles of an ecological movement were widely embraced svobida urged a public acceptance of the sovereign rights of the states and the nation to regulate the use of land by owners so that it may be conserved as a national resource this graphic account of farm life in the dust bowl perhaps the only autobiographical record of dust bowl agriculture in existence was first published in 1941 this new edition contains an introduction by the historian r douglas hurt that not only objectively sets the scene during and after the dust bowl but also places the book properly in the growing body of contemporary literature on agriculture and land use the volume is an important contribution to american agricultural history in general and the the history of the depression and of the great plains in particular

this is the story of lawrence svobida a kansas wheat farmer who fought searing drought wind erosion and economic hard times in the dust bowl it is a vivid account by a farmer who pitted his physical strength mental faculties and financial resources against the environment as nature wreaked havoc across the southern great plains svobida s description of dust bowl agriculture is important not only because it accurately describes farming in that region but also because it is one of the few first hand accounts that remain of the frightening and still haunting dust laden decade of the 1930 s

discusses the 1930s disaster and the hardships that farmers and their families faced during that time

housewives hung wet sheets and blankets over windows and struggled to seal every crack with gummed paper strips a man avoided shaking hands because the static electricity generated from a dust storm might knock his greeter flat children's tears turned to mud dead cattle when pried open were found filled with pounds of gut clogging dirt the simplest thing in life taking a breath became life threatening conditions in america's prairie during the dirty thirties were no blind stroke of nature however they had their origins in human error and in the misuse of the land the dust bowl recounts the factors that led to these conditions how those affected coped and what can be learned from the tragedy considered by many to be america's worst prolonged environmental disaster

includes pictures includes accounts of the dust bowl and dust storms by farmers wives and children includes a bibliography for further reading people caught in their own yards grope for the doorstep cars come to a standstill for no light in the world can penetrate that swirling murk the nightmare is deepest during the storms but on the occasional bright day and the usual gray day we cannot shake from it we live with the dust eat it sleep with it watch it strip us of possessions and the hope of possessions avis d carlson how can you frighten a man whose hunger is not only in his own cramped stomach but in the wretched bellies of his children you can't scare him he has known a fear beyond every other john steinbeck the grapes of wrath it is almost impossible to imagine today but in the late 19th century and early 20th century there were places where land was cheaper than food and more plentiful than water during the homesteading period of the 1860s 1880s the government typically offered land grants of 160 acres to any farmer who could get it cultivated within a certain amount of time with that much land to make productive and a limited number of years to get it cleared and planted men would do whatever it took to get their crops in of course these farmers trying to quickly carve working farms were more concerned with speed than with the impact on the ground itself surviving each

year itself was enough work the future would have to worry about itself while farmers were planting crops the seeds were also being sown for a natural disaster once a severe drought hit the prairie land in the 1930s due to a lack of proper dryland farming methods wind erosion and the drought combined to create horrific dust storms that devastated wide swathes of great plains and even reached cities on the east coast like new york city and washington d c it is estimated that the dust storms affected about 100 million acres during the decade uprooting not just soil but tens of thousands of people as their farms and families suffered with farms failing across vast portions of texas oklahoma new mexico colorado and kansas those who could no longer support themselves became migrants moving to other states like california but the country was still in the throes of the great depression as a result there was a unique class of suffering that was documented not only in pictures but in graphically realistic novels like john steinbeck's *The Grapes of Wrath* pictures of abandoned farms that looked like post apocalyptic ghost towns helped drive the crisis home across the country to the extent that the dust bowl is still well known 80 years later the dust bowl chronicles one of america's dirty thirties an era in which ecological disasters brought economic ruin and permanently affected millions across the country along with pictures of important people places and events you will learn about the dust bowl like never before in no time at all
