a new generation of food activists has come to believe that sustainable farming and eating local are the way to solve a host of perceived problems with our modern food supply system by combining healthy eating and a high standard of environmental stewardship these locavores think we can also deliver important economic benefits and increase food security within local economies but after a thorough review of the evidence economic geographer pierre desrochers and policy analyst hiroko shimizu have concluded these claims are mistaken in the locavore's dilemma they explain the history science and economics of food supply to reveal what locavores miss or misunderstand the real environmental impacts of agricultural production the drudgery of subsistence farming and the essential role large scale industrial producers play in making food more available varied affordable and nutritionally rich than ever before in history at best they show locavorism is a well meaning marketing fad among the world's most privileged consumers at worst it constitutes a dangerous distraction from solving serious global food issues deliberately provocative but based on scrupulous research and incontrovertible scientific evidence the locavore's dilemma proves that our modern food supply chain is a superior alternative that has evolved through constant competition and

ever more rigorous efficiency a world food chain characterized by free trade and the absence of agricultural subsidies would deliver lower prices and more variety in a manner that is both economically and environmentally more sustainable there is no need to feel guilty for not joining the locavores on their crusade eating globally not only locally is the way to save the planet

the objective of this book is to provide a better understanding of tools for soil analysis in order to use them more efficiently it covers sampling problems as well as difficulties relating to actual analysis and quality control
