Carefully structured to instill practical knowledge of fundamental issues, optical fiber communication systems with MATLAB and Simulink models describes the modeling of optically amplified fiber communications systems using MATLAB and Simulink. This lecture-based book focuses on concepts and interpretation, mathematical procedures, and engineering.

This book has been written on the basis of the research done between 2008 and 2010 as part of the European Commission-funded FreightVision project. The FreightVision freight transport 2050 foresight project was funded by the Directorate General MOVE to design a long-term vision for European freight transport in 2050 and to identify actions and research to progress appropriate freight transport measures in Europe. The project was carried out as a foresight process encompassing four conferences in which the project team identified and developed, with the aid of more than 100 experts, an action plan for securing long-term freight transport in Europe. The book provides insights into the freight transport visions and backcasts identified for 2035 and 2050, issues which need to be addressed, and measures which were assessed to be part of future paths to assure an economical, environmental, and social freight transport system.

The digital transformation is in full swing and fundamentally changes how we live, work, and communicate with each other. From retail to finance, many industries see an inflow of new technologies, disruption through innovative platform business models, and employees struggling to cope with the significant shifts occurring. This fourth industrial revolution is predicted to also transform logistics and supply chain management, with delivery systems becoming automated, smart networks created everywhere, and data being collected and analyzed universally. The digital transformation of logistics, demystifying impacts of the fourth industrial revolution, provides a holistic overview of

this vital subject clouded by buzz hype and misinformation the book is divided into three themed sections technologies such as self driving cars or virtual reality are not only electrifying science fiction lovers anymore but are also increasingly presented as cure all remedies to supply chain challenges in the digital transformation of logistics demystifying impacts of the fourth industrial revolution the authors peel back the layers of excitement that have grown around new technologies such as the internet of things iot 3d printing robotic process automation rpa blockchain or cloud computing and show use cases that give a glimpse about the fascinating future we can expect platforms that allow businesses to centrally acquire and manage their logistics services disrupt an industry that has been relationship based for centuries the authors discuss smart contracts which are one of the most exciting applications of blockchain software as a service saas offerings for freight procurement where numerous data sources can be integrated and decision making processes automated and marine terminal operating systems as an integral node for shipments in the digital transformation of logistics demystifying impacts of the fourth industrial revolution insights are shared into the cold chain industry where companies respond to increasing quality demands and how european governments are innovatively responding to challenges of cross border ecommerce people are a vital element of the digital transformation and must be on board to drive change the digital transformation of logistics demystifying impacts of the fourth industrial revolution explains how executives can create sustainable impact and how competencies can be managed in the digital age especially for sales executives who require urgent upskilling to remain relevant best practices are shared for organizational culture change drawing on studies among senior leaders from the us singapore thailand and australia and for managing strategic alliances with logistics service providers to offset risks and create cross functional cross company transparency the digital transformation of logistics demystifying impacts of the fourth industrial revolution provides realistic insights a ready to use knowledge base and a working vocabulary about current activities and
