nationally toxicology programs have evolved from a traditional exploration of the chemistry and applied toxicity of chemicals and drugs to a more comprehensive study of toxicology and toxicology testing as independent entities consequently the second edition of principles of toxicology testing starts with basic toxicological principles including absorption distribution metabolism and elimination of toxins including chemicals and drugs the book then continues with animal in vivo and in vitro toxicology testing methods associated with toxicological analysis and preclinical drug development as in the first edition the book begins with an introduction into the fundamentals of toxicology section i to prepare readers for the subsequent topics and continues through with a discussion of toxicokinetics and human risk assessment this introductory material is useful in understanding the applications of toxicology testing section ii describes the fundamental principles of toxicology testing in animals in greater detail this section describes acute

toxicity studies as well as subchronic and chronic studies performed on animals special emphasis is placed on study design and determination of classical indicators for acute and chronic testing such as the LD_{50} the book examines other short and long term animal toxicity testing methodologies including dermal ocular and reproductive toxicity testing in addition mutagenicity and carcinogenicity studies are also discussed in separate chapters section iii introduces and discusses in vitro alternatives to animal toxicology tests this section emphasizes cell culture methodology and cellular methods for acute systemic toxicity target organ toxicity and local toxicity the contributors present the advantages and disadvantages of alternative methods they also describe the use of high throughput screening and its applications the concepts of standardization and validation of in vitro techniques especially large organized validation efforts currently supported by us and eu regulatory agencies and the theories supporting the development of in vitro methodologies this second edition is a must read for undergraduate and graduate toxicology students industrial and academic research centers will also find the text useful for establishing a toxicology testing laboratory

initially genetic disorders were all considered as rare diseases at present in the mid of 2009 the omim catalogue contains information on more than 12 000 entries of which about 2500 are available for clinical testing based on the identification of the responsible gene defect however altogether it has been estimated that about 8 percent of a population in the economically developed countries will during their lifetime suffer from a disease mainly as the result of their genetic constitution adding to that it is estimated that all diseases have a genetic component which will determine who will be at a higher than average risk for a certain disorder further it is postulated that in the near future this genetic profiling could become useful in selecting an appropriate therapy adapted to the genetic constitution of the person thus genetic disorders are not rare measuring quality of health care related processes became an issue in the 1990s mainly in laboratory medicine but also for hospitals and other health care systems in many countries national authorities started to implement recommendations guidelines or legal procedures regulating quality of health care delivery in laboratory medicine in parallel the use of accreditation as a method assuring high quality standards in testing came in use with the increasing possibilities of performing molecular genetic testing genetic laboratories needed to become involved in this process as many genetic disorders are rare most laboratories worldwide offered analysis for a specific set of disorders and therefore very early on a transborder flow of samples occurred while international quality criteria iso have been in existence for a number of years the regulation of quality issues still may differ between countries based

on their personal experience in the varying fields of quality research and clinical implementation of quality criteria in genetic services the authors of thisbook share their experience and give examples of the implementation of quality issues in national quality systems worldwide this book which is the result of the effort of many persons is destined to aid laboratory managers and counsellors health care managers and other stakeholders in national or international health care service to improve the services to the benefit of patients with suspected genetic disorders
