focusing on international politics this edition features various themes including national interest and power

hans morgenthau s politics among nations is a classic of political science built on the firm foundation of morgenthau s watertight reasoning skills the central aim of reasoning is to construct a logical and persuasive argument that carefully organizes and supports its conclusions often around a central concept or scheme of argumentation morgenthau s subject

was international relations the way in which the world's nations interact and come into conflict or peace a topic which was of vital importance during the unstable wake of the second world war to the complex problem of understanding the ways in which the post war nations were jostling for power morgenthau brought a comprehensive schema the concept of realism or in other words the idea that every nation will act so as to maximise its own interests from this basis morgenthau builds a systematic argument for a pragmatic approach to international relations in which nations seeking consensus should aim for a balance of power grounding relations between states in understandings of how the interests of individual nations can be maximized though seismic shifts in international politics after the cold war undeniably altered the landscape of international relations morgenthau's dispassionate reasoning about the nature of our world remains influential to this day

geography and politics among nations is intended to assist the general reader to grasp the significance of geopolitical awareness in the conduct of foreign relations toward this end the book begins with a cursory review of selected examples of geopolitical thought from antiquity to the present which illustrates some of the main tendencies in geopolitical thinking throughout history this survey of both past and recent geopolitical thinking is followed by a discussion of the intimate relationship between geographical and geostrategic considerations and realistic foreign policy and then continues with consideration of basic factors affecting geopolitical decision making such as the size of a state its configuration climate and often most critically its global and regional location this is followed by a discussion of the frontiers boundaries and borderlands that separate and define the territories of states and the impact on them of technological advancements which is then followed by an examination of the variety of territorial disputes among nations past and present many of which remain unresolved the book concludes with a brief discussion of some of the continuing and prospective geopolitical challenges that are likely to be confronted in the course of the present century

in cooperation among nations joseph m grieco offers a provocative answer to a fundamental question in world politics how does the anarchical nature of the international system inhibit the willingness of states to work together even when they share common interests grieco examines the capacity of two leading contemporary theories modern political realism and the newest liberal institutionalism to explain national responses to the non tariff barrier codes negotiated during the tokyo round of international trade talks according to his interpretation of realist theory grieco characterizes states as defensive positionalists as such they often fail to cooperate because they fear that a joint endeavor while producing positive gains for all participants might also generate disparities in gains among the partners involved grieco demonstrates that this realist concept of defensive state positionalism gives rise to a better understanding of the systemic constraints on international collaboration and of the impact of

anarchy on states than is offered by neoliberal institutionalism drawing on previously unreported archival materials grieco rigorously applies the two theories to an empirical analysis of the cooperative efforts of the united states and the european community during the 1980s to regulate and reduce non tariff trade barriers through the general agreement on tariffs and trade

although he is widely regarded as the founding father of realism in international relations this book argues that hans j morgenthau s legal background has largely been neglected in discussions of his place in the canon of ir theory morgenthau was a legal scholar of german jewish origins who arrived in the united states in 1938 he went on to become a distinguished professor of political science and a prominent commentator on international affairs rather than locate morgenthau s intellectual heritage in the german tradition of realpolitik this book demonstrates how many of his central ideas and concepts stem from european and american legal debates of the 1920s and 1930s this is an ambitious attempt to recast the debate on morgenthau and will appeal to ir scholars interested in the history of realism as well as international lawyers engaged in debates regarding the relationship between law and politics and the history of international law

this text provides an introduction to conceptions of international justice spanning 2500 years of intellectual history from thucydides and plato to morgenthau and waltz it shows how older traditions of political philosophy remain relevant to contemporary debates in international relations

morality among nations a rejoinder to hans morgenthau s politics among nations offers a pathbreaking synthesis of sociobiology and international relations theory it shows that two different moralities evolved in human pre history one the standard morality from which abstract ethical principles arise concerning such things as obligation and justice and the other group morality or the proclamation of the group s right to survive and its superiority over other groups part one surveys the philosophical literature on the question of international morality introducing arguments offered by both classical theorists such as machiavelli hobbes and grotius as well as twentieth century writers such as reinhold niebuhr hedley bull richard falk and charles beitz part two presents the relevant sociobiological theories focusing on robert trivers work on the evolution of moral emotions and richard alexander s and pierre van den berghe s work on the evolution of group behavior and ethnocentrism part three analyzes the traditional philosophical work on international morality in light of new sociobiological ideas

emergence of the modern science of international law is usually attributed to grotius and other somewhat heroic founders of international law this book offers a more worldly explanation why it was developed mostly by german writers in the seventeenth and eighteenth centuries

offering a more accessible alternative to casebooks and historical commentaries law among nations explains issues of international law by tracing the field's development and stressing key principles processes and landmark cases this comprehensive text eliminates the need for multiple books by combining discussions of theory and state practice with excerpts from landmark cases the book has been updated in light of the continuing revolution in communication technology the dense web of linkages between countries that involve individuals and bodies both formal and informal and important and controversial areas such as human rights the environment and issues associated with the use of force renowned for its rigorous approach and clear explanations law among nations remains the gold standard for undergraduate introductions to international law new to the twelfth edition added or expanded coverage of timely issues in international law drones and their use in the air and in space outer space cybercrime and responses the julian assange case environmental law expanded discussion of space law expanded discussion of conflict and non state actors final cases in the 12th edition thoroughly rewritten chapters on areas of great change international criminal law just war and war crime law international economic law newly restored in response to reviews international environmental law new cases statutes and treaties on many subjects

this multidisciplinary volume examines the meaning of global conflict and cooperation by international actors that can be caused by dis or misinformation to people and discusses how to build diplomacy for peace and regional cooperation the book further identifies boundaries of the relationships among the various governments of the world transatlantic alliances international organizations non governmental organizations transnational corporations and the overall interdependence of nations in the making of the modern world topics discussed in this volume include diplomacy international relations theory eurasia politics european union brexit taliban taking over of kabul government and the ongoing afghanistan conflict terrorism isis and al qaeda international law international organizations interstate and intrastate war threats and challenges global civil society religion and culture the volume advances contemporary theories and concepts to explain these issues concerning peoples and cultures in the complex world we live in the book is a must read for students researchers and scholars of international relations political science political history political geography economics and law in general as well as diplomacy political communication and security studies in particular

how are alliances made this book provides a survey of theories of the origins of international alliances and identifies the most important causes of security cooperation between states in addition it proposes a fundamental change in conceptions of alliance systems special reference is made to the middle east during the period 1955 1979

political realism dominated the field of international relations during the cold war since then

however its fortunes have been mixed pushed onto the backfoot during 1990s it has in recent years retuned to the centre of scholarly debate despite its prominence in international relations however realism plays only a marginal role in contemporary international political theory it is often associated with a form of crude realpolitik that ignores the ethical dimensions of political life the contributors to this book explore alternative understandings of realism seeing it as a diverse and complex mode of political and ethical theorising rather than simply a value neutral social scientific theory or the unreflective defence of the national interest a number of the chapters offer critical interpretations of key figures in the canon of twentieth century realism including hans morgenthau e h carr and reinhold niebuhr others seek to widen the lens through which realism is usually viewed exploring the writings of martin heidegger hannah arendt and leo strauss finally a number of the contributors engage with general issues in international political theory including the meaning and value of pessimism the relationship between power and ethics the purpose of normative political theory and what might constitute political reality straddling international relations and political theory this book makes a significant contribution to both fields

an innovative view of the changing geopolitical landscape that draws on the science of complex adaptive systems to understand changes in global interaction liberal internationalism has been the west's foreign policy agenda since the cold war and the west has long occupied the top rung of a hierarchical system in this book hilton root argues that international relations like other complex ecosystems exists in a constantly shifting landscape in which hierarchical structures are giving way to systems of networked interdependence changing every facet of global interaction accordingly policymakers will need a new way to understand the process of change root suggests that the science of complex systems offers an analytical framework to explain the unforeseen development failures governance trends and alliance shifts in today's global political economy root examines both the networked systems that make up modern states and the larger interdependent landscapes they share using systems analysis in which institutional change and economic development are understood as self organizing complexities he offers an alternative view of institutional resilience and persistence from this perspective root considers the divergence of east and west the emergence of the european state its contrast with the rise of china and the network properties of their respective innovation systems the trajectory of democracy in developing regions and the systemic impact of china on the liberal world order complexity science root argues will not explain historical change processes with algorithmic precision but it may offer explanations that match the messy richness of those processes

copeland asks why governments make decisions that lead to sustain and intensify conflicts drawing on detailed historical narratives of several twentieth century cases including world war i world war ii and the cold war
