the use of self instructional learning materials presented through a wide range of media was becoming an increasingly pervasive and important part of the educational scene at all levels from infant school to university much had been written both theoretical and practical about various aspects of the techniques for developing such materials however one phase of the development process while generally recognised to be critical in producing materials of high quality and educational effectiveness had been relatively neglected in the literature this is the phase of trying out the materials in draft form on students collecting feedback and undertaking revision in the light of the ensuing data based on considerable practical experience this book originally published in 1980 examines the

planning and executing of the collection of feedback from students on self instructional learning materials concerned with various subject matters and presented through various media both printed and audio visual a brief survey of the development of materials based learning is provided in order to set the use of student feedback in context and to sort out some of the terminology in common use the main part of the book illustrates a step by step method through all the stages of the try out process from initial planning of the project to final revision of the materials thus a particular approach to the process of trying out draft materials is advocated which is outlined by means of a case study finally there is an examination of whether using student feedback to revise learning materials can actually improve their educational quality and effectiveness with particular reference to the approach described earlier incorporating a full bibliography this study combines a comprehensive review of what is known about this crucial phase of developing learning materials with an original how to do it guide for practitioners which has itself been subject to extensive try out

make dosage calculations easier to master with dimensional analysis dosage calculations can be intimidating but they don t need to be dimensional analysis is an easy systematic approach that shows you how to master simple to complex calculations with consistency and accuracy and reduce medication errors to ensure that drugs are administered safely and documented correctly dimensional analysis which can be used on virtually every dosage calculation problem eliminates the need to use other methods or perform lengthy multi step calculations it s a method of problem solving that organizes data in a manner that is easy to understand and apply
