the algebra conspiracy is an irreverent radical politically incorrect passionate challenge to the increasingly popular program of the educational establishment which requires every student to take two to four years of college preparatory mathematics to earn a

high school diploma these well meaning but misguided people are placing every secondary school student into algebra geometry and trigonometry classes that they may not want that they may not need to fulfill requirements for future employment or that they may not be academically equipped to handle this means for instance that a youngster who has trouble adding common fractions computing with percents or even making change on a ten dollar purchase will nevertheless be required to pass algebra and geometry in many school districts this is already creating an academic nightmare as more and more math teachers are faced with the hobson's choice of either failing many of their students who simply cannot handle algebra and geometry or handing out numerous gift d's or severely watering down the college prep mathematics curriculum so more students can pass the classes the author takes the controversial view that the age of technology notwithstanding a large percentage of today's secondary school youngsters could if allowed live their entire adult working lives very comfortably without ever being forced to set foot in algebra and geometry classrooms there are many other classes that these youngsters should be taking such as cultural or practical arts electives instead of wasting their time in college prep math classes

the struggle for identity in today's schools examines cultural recognition and the struggle for identity in america's schools in particular the contributing authors focus on the recognition and misrecognition as antagonistic cultural forces that work to shape and at times distort identity what surfaces throughout the chapters are two lessons to be learned in relation to identity the first lesson is that identities and the acts attributed to them are always forming and re-forming in relation to historically specific contexts and these contexts are political in nature i.e. defined by issues of diversity such as race ethnicity language sexual orientation gender and economics the second lesson presented by the authors is that identity forms in and across intimate and social contexts over long periods of time the historical timing of identity formation cannot simply be dictated by discourse the identities posited by any particular discourse become important and a part of everyday life based on the intersection of social histories and social actors importantly the social cultural use of identities leads to another way of conceptualizing histories personhoods cultures and their distributions over social and

political groups
