the science of the virus and its effects and the clinical approaches to its treatment and transmission prevention are placed in the context of the history and epidemiology of the hiv aids pandemic each organ system of the body is explored as to manifestations of the disease treatment now and in the future as well as what the disease has taught us about the immune response the science of epidemiology which is so important in allowing for tracking of the disease and potential limitation of transmission is another aspect of aids explored in detail the pandemic manifests differently in different parts of the world and the relevance of the volume is enhanced by its international group of contributors no other text provides the historical and epidemiological context of this disease along with an update of diagnosis and treatment the underlying science and epidemiology of aids are not neglected so the student or clinician who is treating patients with aids can gain a full understanding of hiv aids in individual patients and in their communities

cancer incidences increase in people living with hiv aids over 2 million people currently live with hiv aids in the us this number will increase as haart prolongs the average lifespan and as at least in some states the number of new hiv infections increase again as this population ages their incidence rates for cancer will increase as well recently new rational targets for cancer therapy have emerged but their application to the care of hiv patients is slow because of concerns about the weakened immune status of the patients because of possible drug interactions with haart and because some of the aids defining cancer are rare

one of the most important aspects of aids is the loss of protective immune function in the infected host which leads to increased prevalence of opportunistic infections and cancers this book specifically addresses viral induced human cancers associated with aids and observed in the aids population it addresses the specific treatment required in this special population and the molecular biology of the causative viral agents
