this book uses the psychological literature on rationality to weigh in on the recent debate between virtue epistemologists and epistemic situationists it argues that both sides have misconstrued the literature and that an interactionist framework is needed to square epistemic theory with empirical facts about reasoning and inference the explosion of empirical literature on human rationality has led to seismic shifts across a multitude of academic disciplines this book considers its implications for epistemology in particular it critically evaluates the treatment of the rationality literature within the recent controversy between virtue epistemologists who attempt to ground knowledge in stable epistemic virtues and epistemic situationists who claim that such a project is doomed by empirical evidence of widespread irrationality it links this foundational controversy to two of the most important debates in psychology the rationality wars and the person situation debate the book argues that both virtue theorists and epistemic situationists have misunderstood the implications of these debates leading them to focus exclusively on personal dispositions and situational factors as two independent sources of epistemic success failure and

improvement a more accurate reading of the empirical literature implies that interactions between epistemic agents and their social informational and institutional environments are the fundamental drivers of both rational and irrational behaviour an interactionist framework motivated by this insight conceives of epistemic virtues and vices as both responsive to and responsible for the environments in which they re manifested and cultivated the central aim of this book is to present and defend this novel type of virtue epistemology rationality in context will be of interest to scholars and advanced students working in epistemology philosophy of science philosophy of psychology cognitive psychology and social psychology
