the nikon d850 is a professional grade full frame digital single lens reflex camera dslr produced by nikon the camera was officially announced on july 25 2017 the 100th anniversary of nikon a founding launched on august 24 2017 and first shipped on september 8 2017 the nikon d850 is nikon's latest high resolution full frame dslr boasting a 46mp backside illuminated cmos sensor but in a fairly radical departure for the camera it is also one of the smallest a fastest shooting dslrs the combination of professional should significantly widen the camera's appeal to high end enthusiasts as well as a broad range of professional photographers the d850 has no anti aliasing filter which should allow for slightly finer detail capture but with added risk of moiré if any of your lenses are sharp enough to out resolve a 45.7mp full frame sensor there is still no sign of the clever design nikon patented as unlike the pentax k 1 or sony rx1r ii you won't engage an anti aliasing effect if you do find false color patterns on display captured from the use of a backside illuminated bsi sensor means that the light collecting elements of the sensor are closer to the surface of the chip this should not only improve the effectiveness of the sensor's amazing low light performance but should also be expected to make the pixels near the edges of the sensor better able to capture light approaching with high angles of incidence improving peripheral image quality like the d810 before it the d850 continues to offer an iso 64 mode that allows it to tolerate more light on bright conditions the d850 promotes the same dynamic range advantage as the d810 meaning it should be able to compete with the medium format sensors used on the likes of the fujifilm gfx 50s and pentax 645z the

d850 has gained a more usable electronic front curtain shutter option efcs which can now be used quiet shutter mode as well as low view and mirror up mode to get the full benefit though you need to turn on exposure delay which has had two sub second delay settings added however exposure delay operates across all shooting modes thankfully and reasonably thanks to a redesigned shutter and mirror mechanism mirror shutter shock down to zero to be much of an issue even without ongoing efcs
