this book focuses on the spatial distribution of landslide hazards of the darjeeling himalayas
knowledge driven methods and statistical techniques such as frequency ratio model frm
information value model ivm logistic regression model lrm index overlay model iom
certainty factor model cfm analytical hierarchy process ahp artificial neural network model
ann and fuzzy logic have been adopted to identify landslide susceptibility in addition a
comparison between various statistical models were made using success rate cure src and
it was found that artificial neural network model ann certainty factor model cfm and
frequency ratio based fuzzy logic approach are the most reliable statistical techniques in the
assessment and prediction of landslide susceptibility in the darjeeling himalayas the study

the study and teaching of international human rights law is dominated by the doctrinal
method a wealth of alternative approaches exists but they tend to be discussed in isolation
from one another this collection focuses on cross theoretical discussion that brings together
an array of different analytical methods and theoretical lenses that can be used for
conducting research within the field as such it provides a coherent accessible and diverse
account of key theories and methods a distinctive feature of this collection is that it adopts
a grounded approach to international human rights law through demonstrating the

application of specific research methods to individual case studies by applying the approach under discussion to a concrete case it is possible to better appreciate the multiple understandings of international human rights law that are missed when the field is only comprehended through the doctrinal method furthermore since every contribution follows the same uniform structure this allows for fruitful comparison between different approaches to the study of our discipline

this is the first book of its kind to focus on the geochemistry of the lanthanide series elements in groundwater aquifer environments the contributors are leading researchers in the study of low temperature geochemistry of rare earth elements individual chapters address analytical techniques water rock interactions aqueous complexation and the reactions and processes that influence these heavy metals along groundwater flow paths

this book takes a cross disciplinary and cross cultural look at mass appraisal expertise for property valuation in different market conditions and offers some cutting edge approaches the editors establish an international platform and present the scientific debate as well as practical feasibility considerations heretic and orthodox valuation methods are assessed based on specific criteria partly technical and partly institutional methodological evaluation is approached using two types of criteria operational concerns about how to determine property value differentials between spatial and functional units of real estate in a valid and reliable way technical criteria and the kind of market circumstances being operated in institutional criteria while technical criteria are relatively well researched there is little theoretically informed work on the connection between country context and selection of property appraisal methods the book starts with an examination of current mass property appraisal practices presenting case studies from widely differing markets from the american and dutch where regression based methods have been used successfully for some time to the eastern european and other emerging economies where limitations have to be compensated by focusing on the modelling assumptions the second part of the book looks at sophisticated modelling approaches some of which represent combinations of elements from two or more techniques whatever the exact modelling approach the requirements are always high for the quality of the data and suitability of the method in the final section methods are evaluated and compared according to technical criteria and against institutional contexts with its exceptionally wide coverage of valuation issues mass appraisal methods an international perspective for property valuers addresses property valuation problems common to different countries and approaches applicable in both developed and emerging economies
