a while back i wrote two documents called building a cloud service and the convergence report they basically documented my past experiences and detailed some of the issues that a cloud company may face as it is being built and run based on what had transpired since a lot of the concepts mentioned in that particular document are becoming widely adopted and or are trending towards them this is a continuation of that particular document and will attempt to analyse the issues that are faced as we move towards the cloud especially with regards to security once again we will use past experience research as well as current events trends in order to write this particular report personal experience indicates that keeping track of everything and updating large scale documents is difficult and depending on the system you use extremely cumbersome the other thing readers have to realise is that a lot of the time even if the writer wants to write the most detailed book ever written it s quite simply not possible several of my past works something such as this particular document takes a few weeks to a few months to write depending on how much spare time i have were written in my spare time and between work and getting an education if i had done a more complete job they would have taken years to write and by the time i had completed the work updates in the outer world would have meant that the work would have meant that at least some of the content would have been out of date dare i say it by the time that i have completed this report itself some of the content may have come to fruition as was the case with many of the technologies with the other documents i very much see this document as a starting point rather than a complete reference for those who are interested in technology security note that the information contained in
